Introduction

Earth Changes, Psychic Prediction, & Electromagnetic (EM) Warfare - Using the disciplines of catastrophic geology, seismology, vulcanology, parapsychology, and public interest policy analysis, author Alfred Webre develops a new field theory explaining how millennial prophecies of cataclysm might be fulfilled – not by earth system mechanics, but by the deployment of a new generation of EM weapons.

Earth Sciences & Psychic Prediction

Catastrophic geology, seismology, vulcanology, and astronomy do not forecast cataclysmic scale earth events (massive tectonic shifts, subsidence or rising of new land masses from the ocean, turning of the earth on its axis). Yet high psychics, with confirmed records of accuracy, predict these very cataclysmic events. Assuming these psychics were accessing accurate

precognitive information, what might be an alternative mechanism that could cause cataclysmic earth events?

Electromagnetic (EM) weapons

Electromagnetic (EM) weapons are a possible trigger of cataclysmic earth events. EM fields can superheat the ionosphere, devastating magnetic bands around the earth, and in turn causing massive disruption of the earth's Tectonic plates. A January 17, 1995 earthquake in Kobe, Japan may have been triggered by clandestine deployment of EM weapons. EM strategic warfare includes weather, climate and earth event warfare. Researchers have reported the use of EM weapons in anti-population mind-control operations over major cities.

Prophetic Traditions

Human prophets such as Michel de Notredame (1503-1566), known as Nostradamus, and prophetic traditions, ranging from the Mayan calendar, to indigenous First Nations prophecy converges on cataclysmic earth changes accompanying a transition of earth into a millennial society. Analysis of Nostradamus prophecy reveals that "terrible new weapons," with characteristics similar to EM weapons, caused the cataclysmic earth changes he foresaw.

Extraterrestrial Intelligence

The threat of cataclysmic earth changes caused by secret EM warfare is not occurring in a vacuum. Extraterrestrial intelligence (ETI for short) may be signaling a positive initiative to integrate us into interplanetary society. However, a clandestine command and control network and mentality on our planet appears to be waging clandestine mass psychological warfare (psywar) against the ETI initiative. EM weapons, developed for use against ETI overflights, may also be part of this war to block humanity from participating in the ETI initiative.

How to Avoid Coming Earth Changes

A key to human success is deconstruction of the clandestine network promoting warfare against the human population. EM weapons and the anti-ETI war require deception and secrecy.

EARTH CHANGES proposes a public, mobilized, decade-long human effort

to curb EM weapons, as well as our open community participation with ETI in our integration into organized universe society. EARTH CHANGES identifies deployment of electromagnetic (EM) weapons as a possible cause of cataclysmic millennial earth changes predicted by psychics and prophetic tradition. No near term cataclysmic earth activity is forecast by the earth sciences. However, EM weapons can devastate the ionosphere and magnetic bands around the earth, causing cataclysmic upheaval in the earth's tectonic plates. EARTH CHANGES explores a dramatic new approach to avoid prophesized cataclysm by curbing the development of EM warfare.

PART II

Earth Changes: A Spiritual Approach

Earth Changes: A Spiritual Approach

My first temptation is to launch into a political analysis of the public measures necessary to finally defeat the use of environmental warfare on our planet. The underlying actors and disciplines in the possible planetary debacle of environmental warfare are, after all, quite secular. They consist of military and para-military organizations, military-industrial complexes, geopolitical interests, all gaming for perceived dominance on the chessboard of Earth, with environmental warfare as a cutting-edge weapon.

In some cases, political mobilization of an aroused body politic has been effective in stopping a particularly offensive anti-population weapons system. In the 1980s, nuclear cruise missiles stationed in Western Europe were removed largely because of an aroused European populace, catalyzed into action by the European peace movement. So why not rely on stopping environmental warfare with a secular, public interest political campaign? These are not usual times for a politics-as-usual approach to halting environmental warfare. If ancient prophecies are true, the Earth is now approaching the culmination of a great cosmic cycle, perhaps 26,000 years in length. Earth is returning to a center point within our galaxy, the Milky Way. The significance of that return is profound. The heightened spiritual awareness of Spirit and of the natural order that this returning end-cycle is said to engender may be a primary force in bring planet Earth and our community of human Souls back into natural balance.

A vast and deep shift in our collective, human center-of-being may be

coming into play during the first decades of the twenty-first century. This shift in consciousness, in turn, may mean that the modalities for conflict resolution – in a word, war - which the human community found acceptable in the twentieth century, will no longer be acceptable as the end-cycle shifts in human consciousness develop. The collective human mind, which found itself, willingly or unwittingly, manipulated into the twentieth century's great wars – World Wars I and II, and the regional wars – may no longer allow war into its mid-space.

Before we venture into developing public interest action plans against environmental warfare, we need explore – and internalize - the deeper cosmic forces of the end-cycle we are entering on Earth.

The ancient traditions of First Nation indigenous peoples tell us our Earth is primarily an arena of the Spirit. First Nation civilizations see our Earth as humankind's heritage and their roles as guardians of the Earth. We have turned to “Western” prophets – Edgar Cayce, Michel de Notredame – for visionary guidance on Earth changes and environmental warfare, that perversion of human technology. Now we turn to First Nation prophecies, seeking guidance to bring Homo sapiens back into balance with the processes of our Mother planet, Gaia – the Earth.

The end-cycle prophecies of the Inca and the Maya – two legendary First Nation civilizations – contain guidance and epochal insight into shifts in consciousness and the natural order that we may anticipate for our epoch.

I confess a personal resonance and history with the Inca and the Maya. I often have wondered why I spent deep travel time in the 1960s, exploring and lingering amid the fabled ruins of the Inca and the Maya civilizations. I climbed the Mayan ruins and pyramids at Chichen-Itza and Uxmal; learned some rudimentary Mayan, wrote an article on the Mayans that at least one pastor in the United States read from the pulpit in his church. All the while my peers were backpacking through Europe on the mainstream culture trail, I kept returning back into the realm of the Maya, seeking a signal, an understanding.

Later in the Sixties, traveling as a Fulbright Scholar, I underwent a powerful peak experience along the Inca trail in Peru. More as a pilgrim than a scholar, I wandered alone along the Inca path, linking ruins high above the Urabamba River. Caught in an ineffable transport of consciousness, I camped out for days in the ruins of the hidden sacred enclave, Machu Picchu (this was long before the Inca site became a regulated eco-tourist destination). I reveled in the annual religious festivals at Cuzco, the ancient Inca capital city. I journeyed the purple plains of the Altiplano of Bolivia and Peru, the high plateau of ancient Inca civilization.

In the intervening decades, I reflected on these experiences, so profound a part of my early adulthood, and wondered why they were part of my life design. The answers I received have been predictable. I was culturally

drawn to the area because of my Latino heritage. I was acting out a culmination of past-life experiences. My sojourns in the ruins of Maya and Inca civilizations activated reincarnation memories, and I sought completion in my journeys in my present life.

Now, in the light of Earth's end-cycle and the changes that it may bring, I see a new layer of significance to my Inca and Mayan sojourns. This new layer is less focused on my personal process; more attuned to the cosmic messages that the Inca and Maya may have left us, embedded in time. I feel more confident in bringing you the Maya and the Inca insights because of my experiences with the Inca and the Maya.

I have an intuition that, during my peak experiences in the Sixties, I may have been admitted to some thought-dimension contained Inca and Maya prophecies. What I share with you now, are not only the workings of my intellect, but deep, wordless insights I acquired decades ago. There are other First Nation traditions of Earth changes prophecy. I am drawn to the Inca and the Maya, and my insights about their prophetic traditions are what I am meant to communicate to you.

Tawantisuyu ("land of the four quarters") held the broad reach of the Inca realm of six million souls, stretching along South America's Andean Mountains, highlands and coast. As a formal empire, Tawantisuyu was short-lived, lasting about a century, starting at about 1438 AD, when Inca Pachacuti began the military annexation of regions surrounding the Inca heartland of Cuzco. The vicious and duplicitous assassination of Inca Atahuallpa by Francisco Pizarro on July 26, 1533 triggered an internal collapse of the formal state structures of Tawantisuyu.

The Inca had no formal written language, and their largely oral traditions impacts our access to their prophecies. Formal records and measurements were kept in quipus. Inca communications relied on systems of quipu messengers who traverse 32,000 miles of roads and paved trails.

"A quipu is an assemblage of colored knotted cotton cords... The colors of the cords, the way the cords are connected together, the relative placement of the cords, the spaces between the cords, the types of knots on the individual cords, and the relative placement of the knots are all part of the logical-numerical recording."

With the tools of quipu and frequent quipu messengering as communication tools, the Inca built and administered a state structure and economy in a geographical area roughly the size of the United States of America.

"The Incas can be characterized as methodical, highly organized, concerned with detail, and intensive data users. The Inca bureaucracy continuously monitored the areas under its control. They received many messages and sent many instructions daily. The messages included details of resources such as

items that were needed or available in storehouses, taxes owed or collected census information, the output of mines, or the composition of work forces. The messages were transmitted rapidly using the extensive road system via a simple, but effective, system of runners... The message had to be clear, compact, and portable. Quipu-makers were responsible for encoding and decoding the information.”

While these were the communication tools of the Inca economy and state administration, the Inca spiritual and prophetic tradition appears to have been largely oral. Unlike the Western and other prophetic tradition, there appears to be no single text, calendar, and hieroglyph of standard reference for the Inca prophecies (There are rumors of a prophetic Inca book that may appear in the Inca end-times).

In the place of text, there are the living Q’ero Inca prophecies.

Researcher Brad Berg has documented the moving story of how the Inca prophecies of Mosoq – the time to come - emerged into our contemporary world with the Q’ero Inca shamans. Following a 1949 earthquake in Peru, there was exposed the Golden Temple hidden under a Christian church, a prophetic sign of their re-emergence from intentional isolation since the times of the assassination of the Inca Atahuallpa.

“Dr Alberto Villoldo described how an Earthquake in 1949 underneath a monastery near Cuzco, Peru, had rent the ground asunder, exposing an ancient Inca temple of gold. This fulfilled a sign that the prophecies of Mosoq, the "time to come", were now to be shared with the modern world. Dr Villoldo, a psychologist and medicinal anthropologist, has lived among and trained with the Q'ero shamans and has played a key role in bringing their ritual and prophecy to the awareness of the modern world.” [Reference: Brad Berg, Four Winds Society, Share International, January/February 1997]

In isolation since the collapse of the Inca civilization nearly 500 years ago, the Q’ero preserved their sacred prophecy of great change – pacachuti – a virtually turning inside out of human society, ending chaos, restoring the harmony and balance that had been lost to our civilization.

“The Q'ero are the last of the Incas -- a tribe of 600 who sought refuge at altitudes above 14,000 feet in order to escape the conquering conquistadors. For 500 years the Q'ero elders have preserved a sacred prophecy of a great change, or pachacuti, in which the world would be turned right-side-up, harmony and order would be restored, and chaos and disorder ended.”

The Q’ero made their dramatic re-entry into Andean culture at the annual Feast of the return of the Pleiades in 1955. An assembly of 70,000, including shamans, welcomed them with the words, “We have been waiting for you for 500 years.”

“The Q'ero had lived in their villages high in the Andes in virtual solitude

from the world until their "discovery" in 1949. In that year, Oscar Nunez del Prado, an anthropologist, was at a festival in Paucartambo, in a valley on the eastern slopes of the Andes in southern Peru, when he met two Indians speaking fluent Quecha, the language of the Incas. The first Western expedition to the Q'ero villages then occurred in 1955.

“Four years later, at the annual Feast of The Return of the Pleiades taking place in the Andes, the gathering of 70,000 pilgrims from South America (many of them shamans) were awed and the crowd parted to let the Q'ero, unannounced and wearing the Incan emblem of the sun, make their way forward to the mountain top to make known that the time of the prophecies was at hand. They were welcomed by the assembly and told: "We've been waiting for you for 500 years."

In fulfillment of their prophecies, the Q'ero shamans in November, 1996, traveled to the Cathedral of St. John the Divine in New York, and performed a ritual which had not been performed in 500 years. The 500th anniversary of the murder of last Inca in 1533 will formally occur in 2033.

“...Q'ero elders journeyed to North America in fulfillment of their prophecies. In November 1996, a small group of Q'ero, including the tribal leader and the head shaman, visited several cities in the US, including New York, where they performed a private ceremony at the Cathedral of St John the Divine. The shamanic ritual had not been performed for 500 years. But in the very home of those who symbolized the former conquerors of their Incan ancestors they shared their ritual and knowledge, not only with interested Westerners who were learning their ways, but also with the Dean of the great cathedral, thereby symbolically and spiritually linking the two continents of North and South America.

The ancient Inca prophecy holds that our era is the time of mastay – the reintegration of the peoples of the Earth, guided by munay, love and compassion. A prophetic maxim, “When the eagle of the North and the condor of the South fly together again,” evokes the cooperative movement in rebuilding the Earth.

“According to ancient prophecy, this is the time of the great gathering called the _mastay_, and reintegration of the peoples of the four directions. The Q'ero are releasing their teachings to the West, in preparation for the day the Eagle of the North and the Condor of the South (the Americas) fly together again. They believe that _munay_, love and compassion, will be the guiding force of this great gathering of the peoples.

"The new caretakers of the Earth will come from the West, and those that have made the greatest impact on Mother Earth now have the moral responsibility to remake their relationship with Her, after remaking themselves," said Don Antonio Morales, a master Q'ero shaman. The prophecy holds that North America will supply the physical strength, or body; Europe will supply the mental aspect, or head; and the heart will be

supplied by South America.”

According to the Inca prophecies, the Spanish conquest in 1533, nearly 500 years go, as the beginning of the last pachacuti, or great change.

Interestingly, pachacuti means “cataclysm” or “destroyer” in the Incan tongue. Now, the prophesized signs, including the discovery of the Golden Temple, have indicated the next pachacuti is beginning.

“When the Spanish conquered the Incas 500 years ago, the last pachacuti, or great change, occurred. The Q'ero have been waiting ever since for the next pachacuti, when things that were turned upside down would be set right and order would emerge out of chaos. For the past five centuries they preserved their sacred knowledge, and finally, in recent years, the signs were fulfilled that the great time of change was at hand: the high mountain lagoons have dried, the condor is nearly extinct and the discovery of the Golden Temple has occurred, following the Earthquake in 1949 which represented the wrath of the sun.”

The Inca prophecies are life-oriented. They refer to the end of time as the start of a new way of being and relating to nature and the Earth. They speak of Earth changes and deep shifts within the human psyche, and human spirituality.

“The prophecies are optimistic. They refer to the end of time, as we know it -- the death of a way of thinking and a way of being, the end of a way of relating to nature and to the Earth. In the coming years, the Incas expect us to emerge into a golden age, a golden millennium of peace. The prophecies also speak of tumultuous changes happening in the Earth, and in our psyche, redefining our relationships and spirituality.

“Pachacuti also refers to a great Incan leader who lived in the late 1300s. He is said to have built Machu Picchu, and was the architect of an empire the size of the United States. For the Incas, Pachacuti is a spiritual prototype -- a Master, a luminous one who stepped outside of time. He was a messiah, but not in the Christian sense of the only Son of God, beyond the reach of humanity. Rather he is viewed as a symbol and promise of whom we all might become. He embodies the essence of the prophecies of the pachacuti, as Pacha means 'Earth', or 'time', and cuti means "to set things right." His name also means "transformer of the Earth.

“The prophecies of the pachacuti are known throughout the Andes. There are those who believe the prophecies refer to the return of the leader Pachacuti to defeat those who took the Incas' land. But according to Dr Villoldi, the return of Pachacuti is taking place on the collective level. "It's not the return of a single individual who embodies what we're becoming, but a process of emergence available to all peoples.”

The Q'ero have described how their prophetic knowledge is transmitted through the Star Rites, or Mosoq Karpay, which connect into the collective ancient energies of their tribal mission. No single individual can access these

energies and prophetic knowledge, but only a collectivity.

“The Q'ero have served as the caretakers of the rites and prophecies of their Inca ancestors. The prophecies are of no use unless one has the keys, the rites of passage. The Star Rites, or, *_Mosoq Karpay_* (The Rites of the Time To Come), are crucial to the practical growth described in the prophecies. Following the *_despachos_* (ritualistic offerings of mesa, or medicine bundles) at the recent ceremony in New York City, and after a medicine cleansing by the wives of the shamans, the shamans administered the *Mosoq Karpay* to the individuals present, transmitting the energies originating with the ancestors of their lineage.

“The transmission of the *Mosoq Karpay* is the ceremony representing the end of one's relationship to time. It is a process of the heart. This process of Becoming is considered more important than the prophecies themselves. The *Karpay* (rites) plant the seed of knowledge, the seed of Pachacuti, in the luminous body of the recipient. It is up to each person to water and tend the seed so that it can grow and blossom. The rites are a transmission of potential; one must then make oneself available to destiny.

“The *Karpays* connect the person to an ancient lineage of knowledge and power that cannot be accessed by the individual -- it can only be summoned by a tribe. Ultimately, this power can provide the impetus for one to leap into the body of an Inca, a Luminous One. (In this sense, the Inca referred to is the Self-realized man). That person is connected directly to the stars, the Incan Sun of cosmology.”

The Inca prophecies are themselves a gateway for self-transformation. And that transformation of self is an integral part of the establishment of the next pachacuti or era on Earth.

“According to Dr Villoldo, the Incas believe that we must die to the old models of spirituality and go through the rites of self-renewal, becoming midwives of a new kind of thinking.

"These pathways, paths of the shaman, the individual who walks with beauty and grace in the world, are available to all of us today. We need to demystify them and learn to honor and respect our Mother, the Earth, and our Father, the sun, and the heavens -- and to learn from everything and everyone around us, and to seize those instances of power so that we may take a quantum leap into who we are becoming, all of us together.

"The Q'ero believe that the doorways between the worlds are opening again -- holes in time that we can step through and beyond, where we can explore our human capabilities. Regaining our luminous nature is a possibility today for all who dare to take the leap."

The Andean shamans have no Christ or Buddha to follow. Rather, they say: "Follow your own footsteps. Learn from the rivers, the trees and the rocks. Honor the Christ, the Buddha, your brothers and sisters. Honor the Earth Mother and the Great Spirit. Honor yourself and all of creation."

"Look with the eyes of your soul and engage the essential" is the teaching of the Q'ero."

According to the Q'ero, the next pachacuti has already begun, and will in the end deconstruct the soul-eating paradigm of Western civilization.

"The next pachacuti, or great change, has already begun and it promises the emergence of a new human after this period of turmoil...The paradigm of European civilization will continue to collapse and the way of the Earth people will return."

Let us assume that the Q'ero shamans are in fact the historical guardians and messengers of the ancient Inca prophecies. We know that the Inca's had no formal written language, and there are good reasons to believe the Q'ero's spiritual authenticity.

The Q'ero traditions speaks of Earth upheavals as the transition from one pachacuti to the next occurs. But Earth upheavals are not central to the prophecies. Spiritual transformation on Earth is the core of this prophetic transmission. What the Inca prophecies say is that Earth changes and social upheaval may accompany the pachacuti, but the central reality will be the inauguration of a new spiritual knowledge and understanding among human kind, a new way of relating to the Earth, to their fellows, and to the cosmos.

What might be the mechanisms by which this new cosmic understanding of the new pachacuti will be facilitated? Well, let's explore a few hints the Q'ero give us. The Q'ero elders speak of "a tear in the fabric of time itself," permitting us to see what we are becoming.

"Even more importantly, the shamanic elders speak about a tear in the fabric of time itself. This presents an opportunity for us to describe ourselves not as who we have been in the past, both personally and collectively, but as who we are becoming."

Years ago – in 1977 - I had the opportunity to seek the advice of Jacques Vallee, a scientist and thinker on the issue of the intelligence behind the UFO phenomenon. At the time I was a futurist at Stanford Research Institute (SRI), and I was developing a proposal for the Carter White House and the U. S. National Science Foundation to re-open the government investigation of the UFO phenomenon, then closed by Project Blue Book.

In the course of a conversation over lunch at SRI, it became apparent to me that our views of UFO intelligence shared a great deal in common. Jacques views were in print, and my own book on UFO the nature of UFO intelligence had not been published. The essence of my view was the intelligence behind UFOs was dimensional, not necessarily extraterrestrial in a "spaceman" formulation". UFOs were more in the nature of four-dimensional psychological dream-like phenomena, which served as peripheral cues. The intelligence behind UFOs was psychologically reinforcing human kind to the existence of a higher intelligent form.

“Very good,” I remember Jacques saying when I summarized these views. After reading the Q’ero prophecies, it occurred to me to return to Jacques Vallee’s insights into the nature of UFO intelligence. My purpose is to see if the Q’ero reference to “a tear in the fabric of time itself” was somehow a reference to UFO intelligence as a dimensional phenomenon, conditioning mankind into a more evolved mode of being. If in fact, the Q’ero prophecies give us some well-founded insight into the nature and function of UFO intelligence, that insight may in itself permit an acceleration of the pachacuti process of spiritual transformation here on Earth.

So is this Vallee version of UFO intelligence consistent with the doorway in the fabric in time the Q’ero prophecies speak of?

"The UFO Phenomenon exists. It has been with us throughout history. It is physical in nature and it remains unexplained in terms of contemporary science. It represents a level of consciousness that we have not yet recognized, and which is able to manipulate dimensions beyond time and space as we understand them."

Compare this representation of UFO intelligence – manipulation of time and space – unrecognized level of consciousness – been with us throughout history – with the characteristics described by Q’ero shamans.

“a tear in the fabric of time itself. This presents an opportunity for us to describe ourselves not as who we have been in the past, both personally and collectively, but as who we are becoming.”

Both Vallee and the Q’ero shamans seem to me to be describing a similar phenomenon, which can manipulate time and space, travel the lines of ordinary history, and intervene in our present time as a kind of consciousness mirror, psychologically and spiritually conditioning and cueing humankind. Vallee further amplifies the evidence that the UFO intelligence may be intervening on a psychological reinforcement schedule.

Vallee: A new computer analysis of historical trends, compiled in the 1970s, led me to plot a striking graph of "waves" of UFO activity that was anything but periodic. Fred Beckman and Dr. Price Williams of UCLA pointed out that it resembled a schedule of reinforcement typical of a learning or training process: the phenomenon was more akin to a control system than to an exploratory task force of alien travelers. There are many control systems around us, and some are a part of nature: ecology, climate, etc. Some are man-made: the process of education, the thermostat in your home. If the UFO phenomenon represents a control system, can we

test it to determine if it is natural or artificial, open or closed? This is one of the interesting questions about the phenomenon that has never been answered.

Vallee states other aspects of the view that the intelligence behind UFOs may be dimensional, a psychological and spiritual conditioning mechanism for humankind. His words are, again, consistent with the pachacuti phenomenon prophesied by the Q'ero shamans.

“Vallee: You can get a consistent representation of reality if you look at the world as a collection of events, or 'instances' (as the philosophy of Occasionalism did in the eleventh century), rather than as a collection of material objects moving in 3-dimensional space as time flows. In virtual reality, of course, you can't tell the difference. In the real world information and energy are actually the same physical quantity. In a universe viewed as 'informational events' you should expect coincidences, telepathy, time travel, multiple realities--all those things that seem impossible in the 4-D energy universe. To me that's why puzzles like UFOs are interesting. I don't have a personal theory to "explain" them, but I see them as an opportunity to pose new questions. If it's true that information resides in the questions we ask, coming up with novel problems may be more important than having answers, at this stage of our very limited understanding of the universe.”

Among Vallee's insights, I found the inevitable hedge, the view that the UFO phenomenon, is not the product of a dimensional intelligent, but of electromagnetic energy. An entire category of UFO flaps and encounters can be explained as the interaction of electromagnetic energy along earthquake faults. Close human encounters with UFOs can be hypothetically explained as created by electromagnetic effects on the neural systems of the UFO "contactees." Some researchers have convincingly analyzed UFO abductions as intentional disinformation experiences, induced by MILAB (military abduction) technology.

“Vallee: There is a [UFO] phenomenon. We don't know where it comes from. It's characterized by its physical [traces]. Eighty percent of all the cases have trivial explanations. But I'm talking about the core phenomena. It seems

to involve a lot of energy in a small space; it seems to involve pulsed microwaves, among other things. There isn't much that is known about the effect of pulsed microwaves on the brain, so it's quite possible that some of the stories that you get from people are essentially induced hallucinations in sincere witnesses--the witnesses are not lying. They really have been exposed to something genuine but there is no way to go back to what that thing was, based on their description, because their brain has been affected by proximity to that energy.

“Having said that, I have plenty of colleagues in science and technology I respect who tell me this could be a natural phenomenon--this could be an undiscovered form of energy in the atmosphere. We don't know much about the effect of electromagnetic fields on the nervous system. We're going to be discovering that as we go. So, it's quite possible that there could be a phenomenon like that, a very spontaneous thing.

“Or it could be artificial. If it's artificial it could come from another form of consciousness, which may or may not be extraterrestrial. It's a big universe out there. Who are we to say where it comes from? We can only speculate on that point.”

Much is speculation as to the nature of the UFO phenomenon. To me, the intelligence behind UFOs may well be the tear in the fabric of time referred to by the Q'ero Incas. Indeed, could not a dimensional intelligence use the electromagnetic energy of the Earth environment to create and guide the “upper theater” or evolutionary levels of the UFO phenomenon?

The “lower theatres” of the UFO phenomenon could be the disinformation of the bogus “UFO abductions,” for example, where military abduction technology (MILAB) use electromagnetic energy to create devolutionary experiences for humankind. MILAB's purpose may be to confuse humanity, thus blocking the upward spiritual evolution which the Q'ero Inca prophecies foresee.

The role of “upper theatre” of the UFO phenomenon, if guided by dimensional intelligence, may be to accelerate humankind's moral and spiritual evolution. This view places the UFO phenomenon within the conceptual framework outlined in the Q'ero Inca prophecies.

In the interests of full disclosure, I should note that a 1994 scientific article by Jacques Vallee debunking U.S. Navy experiments in the early 1940s on stealth technology (the “Philadelphia” experiment) was criticized in a June, 1998 article as an alleged scientific hoax. However, I do not believe that case, which may have been a scientific lapse involving a fraudulent witness, detracts from the substance of Vallee's insights into UFO intelligence.

Jacques Vallee also wrote about me in *Messengers of Deception*, in the

context of UFO cults and political power.

“The goal of the manipulation [about UFOs], according to Parnov, is to frighten American citizens into approving the growth of defense spending and to use "the specter of flying saucers to fan the Cold War."

“In a press release dated March 29, 1976, futurologist Alfred Webre and contactee Philip Liss predicted that the present world political order would be transformed into an economically integrated, largely capitalist society. Such phenomena as UFOs were messages from higher intelligent beings signaling the peaceful political transformation of Man, they said. (2)

“This history of the interaction between flying-saucer contact and politics goes way back, to the early California contactees. In those days many occult groups linked to power-hungry organizations were extremely active. Right after World War II, when a branch of Aleister Crowley's O.T.O. (3) flourished in Los Angeles, two of the most ardent members were Jack W. Parsons, a propulsion engineer, and L. Ron Hubbard, a science-fiction buff. Jack Parsons met a Venusian in the desert in 1946, and went on to be one of the founders of the Jet Propulsion Laboratory and of the Aerojet Corporation.

I have dealt with the connections between cult behavior, political power and higher intelligence in *Journey I: Recovery*, and Vallee has never spoken to me directly about his comments – even though we met in his capital venture office, shortly after their publication.

If the Inca left us oral prophecy embodied in the Q'ero shamans, the Maya left us the celestial precision of the prophecies embodied in the Mayan calendar.

The Maya also left a paucity of written records because of the destruction of Mayan writing by the Spanish conquest.

“The Mayan civilization was the height of pre-Columbian culture. They made significant discoveries in science, including the use of the zero in mathematics. Their writing was the only in America capable of expressing all types of thought. Glyphs, either representing syllables or whole concepts, were written on long strips of paper or carved and painted on stone. They are arranged to be read from left to right and top to bottom in pairs of columns.... They wrote detailed histories and used their calendar to predict the future and astrological events. Fray Diego de Landa, second bishop of the Yucatán ordered a mass destruction of Mayan books in 1562 and only three [or four] survived.

“An elaborate system of writing was developed to record the transition of power through the generations. Maya writing was composed of recorded inscriptions on stone and wood and used within architecture. Folding tree books were made from fig tree bark and placed in royal tombs. Unfortunately, many of these books did not survive the humidity of the tropics or the invasion of the Spanish, who regarded the symbolic writing as the work of the devil.

“Four books are known today: The Dresden Codex; The Madrid Codex; The Paris Codex; and The Grolier Codex.”

One Mayan artifact to which we have access is the Mayan Calendar, which antedates the Mayan civilization, and stretches out into a distant future.

The formal history of the Mayas encompasses their Classic Period (300-900 AD) and their Post-Classic Period (1000-1500 AD).

“Most artistic and cultural achievement came about during the Classic period 300 - 900 AD. The Maya developed a complex, hierarchical society divided into classes and professions. Centralized governments, headed by a king, ruled territories with clearly defined boundaries. These borders changed as the various states lost and gained control over territory. Mayan centers flourished in Mexico, Guatemala, Belize, Honduras, and El Salvador. The major cities of the Classic period were Tikal (Guatemala), Palenque and Yaxchilán (Chiapas, Mexico), Copán and Quirigua (Honduras). For most of this period, the majority of the Maya population lived in the central lowlands of Mexico and Belize.

The themes of the Post Classic 1000 - 1500 AD Post Classic period were growth and ruin.

“[At the beginning of the Post-Classic period] the Maya migrated to the Yucatán peninsula. There they developed their own character, although their accomplishments and artwork are not considered as impressive as the Classic Maya. Chichén Itzá (near Valladolid), Uxmal (near Mérida) and Mayapán (west of Chichén Itzá) were the three most important cities during the Post Classic period. They lived in relative peace from around 1000 - 1100 AD when Mayapán overthrew the confederation and ruled for over 200 years. In 1441 the Maya who had previously ruled Uxmal destroyed the city of Mayapán and founded a new city at Mani. Wars were fought between rival Mayan groups over the territory until the region was conquered by the Spanish.”

To understand the Mayan prophecies, we must first delve into the Mayan Calendar. It contains the Maya's most sublime science, based on an

advanced astronomical knowledge such as knowledge of the precession of the equinoxes. Researcher John Major Jenkins observes, "As it says in the Popol Vuh: 'by sheer genius, by sheer acuity, they got it [the Mayan Calendar] done.'"

"Based upon these simple facts, ancient skywatchers in Mesoamerica were apparently aware of a subtle celestial process, the precession of the equinoxes. Knowledge of that process, and the fact that a major alignment in that process culminates at the end of their Great Cycle, strongly suggest a cosmological understanding which modern yet to explore. While today the conjunction is hidden behind the rays of the solstice sun, to early skywatchers the future convergence would have been the focus of intense calendar calculations and eschatological myth-making. As it says in the Popol Vuh: "by sheer genius, by sheer acuity, they got it done." People interested today in the scope of ancient Mesoamerican knowledge Inescapably must incorporate these recent findings into their thoughts. In doing so, we can better appreciate the profound scale of the cosmological understanding possessed by ancient New World cultures, to which millions of present-day Indians in Middle America are heir."

The differences between the Mayan calendar and its Western counterparts are profound. The Mayan calendar is multi-dimensional, based not solely on the orbital travel of Earth around its Sun.

"The European calendar mandated by Pope Gregory in 1583 is the only world calendar that did not intercalate at least two celestial cycles. The Hebraic calendar acquired by Enoch after he was translated in a beam of light intercalated solar and lunar cycles in a fashion similar to the Maya. The Dogon in Africa were given four calendars by visitors from Sirius B: Solar, lunar, Venusian, and civil. The Tibetan calendar is so similar to the Mayan that traditional scholars now speculate that they share a common origin. The Vedic calendar is based on cosmic cycles, or Yugas. An ancient Hindu astrology used 27 houses of 13 degrees 20 minutes, which are key numbers in the Mayan calendar...."

"In the 1950s, Euro-American astronomers ran headlong into the stunning reality that Native Americans were masters of a sophisticated astronomy previously unrecognized. Since the New World was conquered, the Europeans had believed that Native Americans were ignorant of astronomy. In fact, the Native American concept was completely different than the European and thus not recognized. Where European astronomers tracked large objects, such as the sun and moon, in direct courses, the Native

Americans tracked small objects relative to large objects, a far more complex and accurate system. The two systems perceived the heavens from such radically different view points, that the Europeans did not recognize the Native American system as astronomy.”

The Mayan calendar prophesies an era of great shift in human consciousness and civilization, and calculates the cycles of time within which these rebirths of consciousness will take place. As a general observation, Earth changes and disruptions usher each rebirth in human consciousness.

“The ancient Maya noticed that the winter solstice sun was slowly moving towards the Milky Way. Two great markers in the sky were converging, presenting a rare celestial juncture. Their calendar accurately tells us when this will occur, and it meant more than the birth of a new solar year. It meant the beginning of a new Great Cycle of time, the resetting of the great celestial star-clock of precession and, perhaps, an unprecedented shift in the nature of human consciousness and civilization.”

The Mayan calendar can be thought of as a combination Star Gate and mind map, a multi-leveled tool for navigating life as a coordinate of time-space-energy channels that open and develop with the mechanics of celestial movements.

“The Maya understood 17 different Calendars based on the Cosmos. Some of these calendars go back as far as ten million years and are so difficult that you would need an astronomer, astrologer, geologist, and a mathematician just to work out the calculations. Lucky for us we only need to work with three of these calendars. The calendars that are most important to beings of Earth are the Haab, the Tun-Uc and the Tzolk'in. The Tzolk'in is the most important and the one with the most influence.”

Celestial within cycles – cycles around our Sun and around our galaxy form the basis of the Mayan calendars. The calendars were a precision tool for divination, based upon the architecture and movements of celestial bodies.

“The Tzolk'in is the Sacred calendar of the Maya and is based on the cycles of the Pleiadies. The cycle of the Pleiadies uses 26,000 years, but is reflected in the calendar we are using by encompassing 260 days. It uses the sacred numbers 13 and 20. The 13 represents the numbers and 20 represents the sun/glyphs. The Tzolk'in has four smaller cycles called seasons of 65 days each guarded by the four suns of Chicchan, Oc, Men and Ahau. There are also Portal days within the Tzolk'in that create a double helix pattern using 52 days and the mathematics of 28. The traditional Maya is still using this sacred calendar for divination all over the Yucatan, Guatemala, and Belize, and Honduras.

Now what does the Mayan calendar say about Earth changes in our era? Would it surprise you that the answer is very similar to the Inca prophecies, only more precise?

According to the Mayan Calendar, the Mayan Long Count end-cycle occurs on December 22, 2012. The Long Count end-cycle also coincides with the end of a larger 26,000-year galactic cycle of the Mayan calendar. Mayan cosmology holds that cataclysmic Earth changes, as well as endowment of human cosmic consciousness will accompany these end-cycles. A possible mechanism for predicted Earth changes is the vast distortions of the Sun's magnetic field, brought on by density waves emanating from the core of our galaxy (the galactic "Sun"). Human environmental weapons could exacerbate these Earth changes. Contemporary science holds that galactic density waves may have been responsible for creating our Sun, but lacks the sophisticated understanding the Mayans possessed about galactic cycles. The Mayan calendar predicts that Earth and the solar system will enter these galactic beam-waves around the 2012 AD end-cycle

The Mayan calendar predicts that the coming galactic density beam creates Earth changes, as well as a new era of expanded cosmic consciousness on Earth. The age ushered in by the Mayan end-cycle in 2012 AD may finally transform our war-like and eco-cidal human culture into an enlightened civilization.

The train of discovery and insight responsible for decoding the Mayan prophecies is a moving one.

"In 1880 a brilliant, German scholar, who was working as a librarian in Dresden, turned his attention to this codex. By a process of extraordinary detective work he cracked the code of the Mayan calendar making it possible for other scholars and explorers to translate the many dated inscriptions to be found on buildings, stele and other ancient Mayan artifacts. He discovered that the Dresden Codex itself was concerned with astronomy providing detailed tables of lunar eclipses and other phenomenon. These were so accurate that they put our own calendar to shame. He also found evidence for a curious magic number- 1,366,560 days, which could be factor[ed] in a number of ways and which harmonized the cycles of Venus and Mars with two yearly cycles also used by the Maya: the sacred Tzolk'in of 260 days and the Haab of 365 days. However, he also found that they had another system of counting the days relative to a starting date, called the Birth of Venus and now known to be 13 August 3114 BC. This calendar was divided into months or uinals of twenty days, years or tuns of 360 days and longer periods of 7200 days, the katun and 144,000 days, the baktun. The number 13 was magically important to them and they believed that, starting from the Birth of Venus, after 13 of these longest periods, or baktuns, the world would

come to an end. Working from their start date this Mayan Prophecy points to a date in our own time, 22 December 2012.

Researchers Gilbert & Cotterell have done us a great service in correlating and deducing a possible mechanism by which cataclysmic Earth changes could take place. As the Mayan calendar predicts, Earth changes may be triggered during a transition window around the end-cycle date, December 22, 2012.

That mechanism is electromagnetic energy, emitted by solar activity in sunspot cycles, and their devastating effects on the Earth's magnetosphere – and consequently on the Earth's weather, climate, and seismicity - of the Earth. The electromagnetic effects of sunspot cycles can actually cause a shift in the magnetic fields and poles of the Earth, unleashing great earthquakes, climatic and weather shifts.

Think of sunspots as mammoth electromagnetic generators, aimed at the Earth's magnetosphere and magnetic field.

What Gilbert & Cotterell have postulated is that the cycles of the Mayan calendar may be structured around the cycles of destructive sunspot storms, and the destructive effects of the electromagnetic energy they release on the magnetic field of the Earth. As certain Mayan cycles end and new cycles begin, the Earth may suffer cataclysm caused by the electromagnetic energy of storms on the surface of the Sun. Cotterell found evidence of a larger sunspot cycle of 1,366,040 days, exactly two tuns smaller than the Mayan Long Count of 1,366,560 days. Cotterell proposed that the Mayan and the sunspot cycles are related.

“As expected his model predicted that there should be a sunspot cycle of roughly eleven and a half years, closely corresponding to what has been observed over several centuries. However, he also found graphic evidence for longer cycles including a period of 1,366,040 days. His work took a new turn when he read about the Mayan super number from the Dresden Codex: 1,366,560 days. This was exactly two 260-day cycles larger than his theoretical sunspot period. He therefore proposed that the two were related. As his earlier work on what he called Astrogenetics indicated that human fertility was dependent on the presence of sunspots, he now had evidence that the Mayan calendar was not arbitrary but was based on a knowledge of the effects of sunspots. This explained the near obsession they had for long cycles of time and their belief in the rise and fall of four previous ages of man.”

If these correlations are at all factual, the end of the 1,366,560 day mega-cycle Long Count may be related to a 1,366,040 day sunspot cycle. If the end of the Mayan Long count is in fact high in sunspot activity, an indeterminate window around December 22, 2012 may well be a period of

cataclysmic Earth changes.

Cotterell describes the mechanism by which sunspot activity twists the electromagnetic field of the Earth, ultimately triggering Earth changes. Solar radiation is also clearly the most important factor in climatic changes... correlating radio carbon levels with solar activity, the European climate, and the advance or retreat of alpine glaciers.... When the sun is very active it generates a large number of sunspots, and these in turn cause large numbers of charged particles to be thrown into space. This means that there are clouds of charged particles between the sun and the Earth, and there is a thickening of the Van Allen belts.

There is a direct mechanism between electromagnetic solar activity and Earth changes. The Maya calendar's prediction of four prior Earth changes and a fifth destruction in 2012 AD may correlate directly with the five field shifts in the Sun's magnetic field during the Long Count, beginning on 14 August 3114 BC, and ending on December 22, 2012.

"When the sun's magnetic field shifts direction, it tends to twist the Earth off its axis. The tilting Earth is subjected to earthquakes, floods, conflagrations, and volcanic eruptions.

"The sun's magnetic field shifts five times every long cosmic cycles. This would seem to be the reason that the Maya and others believed that the Earth has been destroyed four times in the past, and that destruction at the beginning of the 21st century in this, the fifth age of the sun, will follow in the same way."

Cotterell concludes that the end of the Mayan Long Count may well be accompanied by a reversal of the Earth's magnetic field, caused by solar activity (sunspots). This magnetic reversal of axis may tend to twist the Earth's magnetic field, inducing tilt in the Earth itself. The outcome may be Earth changes on a cataclysmic scale – mammoth tectonic events; earthquakes; ocean flooding a tsunamis; volcanism.

"...the Mayan prophecy for the end of the fifth Age concerns a reversal of the Earth's magnetic field. This and its associated cataclysm, he believes, will occur around 2012 AD."

Cotterell correlates the Mayan calendar cycles with the Edgar Cayce prediction that remains of Atlantis would be found off Bimini, Bahamas in 1968 or 1969. As I did in 1974, Cotterell concludes that the submerged temple or sea wall structures, discovered by the 1968-69 Dr. J. Manson Valentine expedition, represent an intentional fulfillment of the Cayce prediction.

Now we can speculate with Cotterell on very the near-miraculous source of

the knowledge behind the Mayan calendar. The date the Edgar Cayce precognitive information places on the cataclysm which sank this Poseidia portion of Atlantis was 10,500 BC. Cotterell argues, that following the cataclysm, the Poseidia-Atlantis survivors made their way by sea from the Bimini area (Poseidia may have been an island the size of Cuba), carrying their advanced cosmological knowledge to the Yucatan – Palenque area, where their culture transformed itself over the centuries into the Maya. That Atlantis is possibly the original source for the cosmological knowledge of the Mayan calendar may be supported by references in the Popol Vuh and other sacred Maya texts. If the line of reasoning suggested by the precognitive Cayce information and the analysis of Mayan sacred texts is a correct one, the advanced cosmology of the Maya calendar may be a direct legacy from a pre-cataclysmic Atlantean civilization. An Atlantean origin would go a long way toward explaining the mystery of how the Mayan, who had relatively simple agricultural technology, acquired such advanced astronomical and cosmological technology as the calendar. The Mayan ruler and priestly castes would have preserved and transmitted the calendar's technology and knowledge over the generations.

The Inca and the Maya prophecies appear to have yet another function in common – providing a dimension of deep meaning for the intelligence behind UFOs. Let's revisit the statements of the Q'ero shamans that our era would see

“A tear in the fabric of time itself,” allowing humanity to see what it was becoming.

This time-tear, we suggested, could refer to a dimensional opening by the higher intelligence behind UFOs, using the UFO phenomenon to subliminally cue and condition humanity to become the advanced beings we can be in the future.

The Mayan cosmologist formerly known as Jose Arguelles correlates a July 11, 1991 UFO flap over Mexico with Sixth Sun prophecies made by Mayan priests in 755 AD.

“Mayan cosmologist and scholar Jose Arguelles reports a wave of confirmed UFO sightings over Mexico starting on July 11, 1991, the date of the “Sixth Sun” total solar eclipse predicted for that date in 755 AD by Mayan priests using the calendar. The Mayan prediction was that an era dominated by two life-altering events “cosmic awareness and Earth changes” would commence with the Sixth Sun eclipse. The 1991 UFO flap drew international attention and rigorous analysis by UFOlogist from a number of countries, including Japan.

“Equating an end-date for the Mayan calendar round with a date in the European-based Gregorian system has been a heartbreaker for astronomers.

Since the European and Native American systems are so different, the only truly accurate method of synchronizing the two was to identify a significant astronomical event, such as an eclipse, recorded on both calendars. This has been impossible due to differences in locations and calendars until July 11, 1991. 'In 755 AD Maya Priests prophesied the total solar eclipse of July 11, 1991 would herald two life altering events for humankind: cosmic awareness and Earth changes. Shortly after 1:00 P.M., on July 11th, the prophecy began unfolding...'

“Beneath the eclipse of the century, that Mayas had labeled 'The Sixth Sun', a silvery disc shaped object hovered silently above the world's largest city. [Seventeen (17)] different people, unknown to each other, in deferent locations of Mexico City, videotaped the structured ship...Cosmic Awareness had begun.

“The wave of UFO activity continued in the skies over Mexico and, due to the video camcorder, became the most documented mass sighting ever.

“For months, a team of international investigators from the U.S., Mexico, and Japan followed the trail of the UFO sightings through the volcano zone to Mount Popocateptl, the fourth largest volcano in the world... Once dormant... Now awakening...!.

Richard G. Gall of Scotland's Skywatch International has published a report of the July 11, 1991 Mexico UFO sighting, reviewing the documentation and computer analysis of video taped images of the UFO craft-shaped objects in the sightings. His report includes multiple images of the UFO craft-like object, taken by different civilian observers and a computer enhancement analysis of the images themselves.

“Millions of people in the huge metropolis, Mexico City held their breath on the afternoon of 11 July 1991 as the moon eclipsed the sun, turning day into night for over six minutes. But as stunning as this eclipse was, an even more fantastic event occurred which managed to steal the attention of the thousands of onlookers. At exactly 1:22pm, a shiny metallic object darted down from the skies and hovered silently to the left of the eclipsing sun. It stayed suspended in the sky for a full half-hour, long enough to be video-recorded by 17 different people, all in separate locations throughout the city.

“Analysis of these tapes later confirmed that this was a metallic craft, spinning on its own axis. (See Images).

“In the ensuing months, Mexico became gripped with what Jaime Maussan - one of the country's most respected TV journalists and host to the popular news programme '60 Minutos', has described as 'UFO fever'. Maussan first became involved shortly after the eclipse when he appeared on TV asking the public to send in any videos they had taken of the UFO. The response was overwhelming, and his office was inundated with spectacular footage of both day and nighttime UFO activity filmed since the eclipse.

“Maussan, who previously had no real interest in UFOs, said, "I am a journalist and, as such, I only wish to deal with the facts. However, since I became involved with this, along with the rest of Mexico, I have seen overwhelming evidence that convinces me that my country is being visited regularly by a huge number of extraterrestrial craft. There is no other explanation."

“Maussan had collaborated with the US husband and wife PI team Lee and Brit Elders in producing three documentaries, 'The Messengers of Destiny' series, which have been widely praised by the UFO community for presenting some of the finest UFO footage ever seen by the public or researchers. For many UFOlogists, the footage collated in the video series provides firm evidence that whatever the objects are, they cannot be a product of any known terrestrial technology.

“For example, in one video sequence, a UFO can be seen gliding through cloud. While sceptics argue that the object could be a bird, or a plane (yeah right), or even a meteor (YEAH RIGHT), computer analysis of the image clearly shows that it was a solid, metallic structure shaped like a hockey puck. Computer enhancement of the footage also allows researchers to magnify the individual pixels from which the images are composed, revealing details that would otherwise be invisible to the naked eye.

“An analysis also revealed the presence of two other, smaller craft below the main metallic structure - something not visible on the video. (Images available).

“Computer enhancement has also high-lighted the incredible manoeuvrability of the objects. For instance, in dozens of videos, UFOs are initially recorded as a single circular object that slowly splits into two distinct craft. In one remarkable sequence, a UFO is seen to split into five distinct objects. Other craft are seen accelerating at enormous speeds, moving at impossible speed as they shoot from one part of the sky to another. Analysis shows that the UFO blinks out of sight in a single video frame - less

than a 60th of a second!

“Despite this compelling video evidence, the Mexican government has so far remained tight-lipped on the UFO issue. Maybe one of the reasons why, is the concern expressed by airline pilots for the safety of passengers flying into Mexico's airports. This was dramatically illustrated by a series of worrying events that began in the summer of 1994.”

“On the evening of July 28, flight 129 was making its final approach into Mexico City airport. The crew and 109 passengers of the DC9 were all expecting a routine landing when suddenly they were involved in a mid-air collision with an unknown object. The pilot, who was a man named Raymond Cervantes Ruana, was forced to take emergency measures and later stated "I've never felt an impact so strong. When we checked the plane we discovered that one of the shock absorbers had been ripped off."

“Ruana managed to land the aircraft safely and rushed to the control tower. "They told me that as I was making my final turn there were two UFOs on their screen. I probably crossed my path with theirs. This is when I declared an emergency." Air traffic controllers confirmed there were no other civilian or military aircraft in the vicinity during the landing.

“Only a month later, another near catastrophe occurred when Flight 304 from Acapulco was attempting to land. The captain later stated "A big silver object came out of a cloud. It was metallic and circular. We clearly saw the object. It passed directly under the plane and we were forced to make a very difficult manoeuvre to avoid a collision." On landing, the furious pilots confronted the controllers and demanded why they received no warning.

“According to Maussan, these and numerous other events involving passenger aircraft had resulted in a major public outcry. Can you imagine what would happen if there had been a head-on collision with a passenger jet over densely populated Mexico City? How would they explain an accident like this to the general public? Probably the same as TWA Flight 800, cover up the truth.

“Maussan was requested by the Mexican Pilots Association to present two lectures about the UFO wave to assembled pilots. [He] knows how worried they are, they don't care if they are UFOs or identified, they just want to avoid an accident....”

“The Mexican wave was provided many researchers with vast amounts of

solid evidence supporting the extraterrestrial hypothesis. The aerial activity recorded on video goes way beyond the fleeting glimpses of UFOs seen in many previous cases and, as yet, denies any terrestrial explanation. Initial efforts to explain the UFOs as the planet Venus or meteors have been scientifically rejected, and sceptics have avoided investigating the Mexican material, even deep down they know, just to ignorant to admit it.”

Mexico UFO 7-11-91 Computer enhancement

“Computer enhancement of the footage also allows researchers to magnify the individual pixels from which the images are composed, revealing details that would otherwise be invisible to the naked eye. An analysis also revealed the presence of two other, smaller craft below the main metallic structure - something not visible on the video.”

Mexico UFO 7-11-91 Puebla sighting

“On 11 July 1991, this bright object was filmed by one of the many Mexicans who lined the streets of the town of Puebla to watch the solar eclipse. The pulsating, disc-shaped craft moved slowly and silently through the sky, and was mistaken by many for a planet. On the same day, dozens of other witnesses throughout Mexico video-recorded the

mysterious craft.”

Going over the documentation and analysis of the Sixth Sun UFO sighting, it is reasonable to conclude that real phenomena took place that day. Yet, what were the Sixth Sun phenomena, and how might the phenomena relate to the Maya prophecies? Each entity that has reported on the Sixth Sun UFO flap, has reported it from its own institutional perspective. Reuters News Service's wire report, dated 5 December 1997, on a UFO conference studying the Sixth Sun flap is typical of the tongue-in-cheek approach the news business has taken:

“ACAPULCO, Mexico (Reuters) - Mexico has long faced resentment in the United States for exporting illegal aliens, but since 1991 the country has faced its own alien invasion -- by extraterrestrials, that is.”

UFO researcher Richard G. Gall explores another possible hypothesis – that the Sixth Sun UFO flap was an intentional disinformation event, staged by secret (probably U.S.) military UFO-aircraft, in fulfillment of the Mayan prophecies. Gall notes that the silence of the Mexican military around the flap could be interpreted several ways. He also notes the similarity in profile of the Sixth Sun UFO craft to craft sighted near Area 51 Nellis Air Force Base in Nevada.

“Despite the threat posed by unknown craft - whether alien or not - appearing along civilian air routes, the Mexican air force has only rarely scrambled fighters in an attempt to intercept the objects. This policy of non-intervention has led many researchers to assume that the government does not regard the UFOs as a threat, and may even be welcoming them. Alternatively, the authorities may know exactly what the objects are, but unwilling to discuss it....”

“In 1995, security-camera footage taken at Nellis Air Force Base in Nevada, was smuggled out and presented to UFO researchers. The video shows a

pulsating metallic craft climbing through the sky and has been authenticated by a number of military and defense analysts, including Bill Sweetman, a leading Stealth-technology researcher. In 1996, researchers from the US TV programme 'Sightings' compared the craft at Nellis, with the object filmed in Mexico during the eclipse. Some researchers concluded that the two were identical, and suggested that the UFOs over Mexico could be part of a secret US military programme....”

Gall himself leaves us with one key question – why did this very large exhibitionist UFO flap occur in Mexico?

“Despite the strength of the evidence, one question remains. Why Mexico? Jaime Maussan speculates that the population is being tested to gauge its reaction towards the presence of extraterrestrials. He believes that such overt and seemingly deliberate exhibitionism can only be explained as a prelude to something greater.”

He answers his own question with a personal conclusion that the July 11, 1991 Mexico UFO phenomenon can be most creatively seen in the context of the Mayan prophecies, specifically the Sixth Sun prophecy.

“One of the most intriguing aspects of the current UFO wave in Mexico is the fact that this and other events were prophesied accurately over 1000 years ago by the country's ancient ancestors, the Maya. The decoding of the Dresden Codex, a stone tablet depicting Maya cosmology, revealed that the ancient civilization was able to predict the cycle of solar eclipses with great accuracy. According to the Maya, during the birth of the 'sixth sun' (the period following an eclipse in 1991) the 'Masters of the Stars' or 'Messengers of Destiny' would return. The prophecy continues 'In the era of the sixth sun, all that is buried will be discovered, truth shall be the seed of light and the sons of the sixth sun shall be the ones who travel through the stars.' (Us?) For many UFO researchers this is strong evidence that the objects over Mexico are definitely from another world.” .

Let's retreat for a moment to the science of communications. Context functions as an interpretive framework within which a communication is made. A communication's context is its single most effective component that enhances the definition, depth, and message content of the communication.

How do the Inca and Maya prophecies function in the Sixth Sun UFO flap? They provide a high-definition context for the UFO flap itself. The UFO flap becomes a communication within the backdrop of the Maya and Inca prophecies of cosmic awareness and Earth changes.

If a UFO flap occurs on a date predicted by the Star Gate and mind map that

is the Maya calendar, all of the referents of the Maya cosmology become part of the UFO flap's communication. Specifically, Maya references to Earth changes culminating in 2012 AD. Specifically, Maya and Inca prophecies of the sixth world to come – an age of cosmic awareness among humankind. The Maya calendar and Inca prophecies place UFO phenomena in full context, as a “tear in the fabric of time.” Whatever the nature of the UFO phenomenon might be – dimensional, extraterrestrial, electromagnetic, human-military – the context of the Maya and Inca prophecies surround it with the deepest referential meaning. The Sixth Sun UFO flap, acquires a fullness of communication precisely because it occurs as a fulfillment of Maya prophecies of cosmic cycles. Without the Maya calendar context, a UFO flap over any major Western city would be remarkable, to be sure, but the information communicated by the flap would be less rich, more superficial and ambiguous.

A typical, Western UFO sighting would be wrapped in a thinner, more secular context without a living, rich, ancient cultural and prophetic reference. Perhaps that is why Western cultures find the UFO phenomenon puzzling, irritating and fractious – they lack a cultural context and grounding for interpreting the phenomena, as modern-day Mayan and Incan-based cultures may have. Native American medicine man Robert Ghost Wolf alludes to this lack of cultural reference for UFOs in North American culture. “Why is it that they have news about these (UFOs) in Mexico, but they don't have news of them here? Why is it that people in other countries can sit down and have intelligent conversations about what's going on, while we don't have them here? We are ridiculed and called madmen and heretics....”

These observations about the relationship of Mayan prophecy and UFO flaps may have been borne out by Mexican UFO flaps following the 1991 Sixth Sun flap. Gall reports formations of UFO craft-objects flying in formations that look like astronomical constellations.

“Whatever their purpose, the strange objects above Mexico continue to be witnessed and filmed. The latest footage appears to show groups of up to 40 of these UFOs forming into patterns which many researchers have taken to be constellations. Could this be an obscure attempt at communication, as some researchers believe? Let's wait and see.” .

In parsing these reports, I realize the temptations and the pitfalls of over-projecting anthropomorphic views onto the UFO phenomenon. In prior theoretical work on UFO content analysis, I suggested that UFO encounters could be analyzed and interpreted using the disciplines of dream interpretation, because many UFO reports were structured almost as dreams, with conscious and subconscious content.

Taking that approach, it would seem that the constellation pattern would

constitute a deliberate communication, assuming the UFO phenomenon has intention and intelligence. If the “formation” reports are erroneous, well the reports are just more data. As an intentional communication, however, the UFO formation might mean a simple signal – “outer space”; “we are from a constellation.”

Remember, however, that the Sixth Sun UFO flap occurred within the context of a Calendar prophecy that Mayan priests had made in 755 AD. It seems more reasonable to assume that, as Mayan calendar may have been the context for the Sixth Sun UFO flap, so follow-on UFO flaps may also have been designed within a Mayan calendar context.

The Mayan calendar itself is structured around the celestial clockwork of constellations. Therefore the reports of formations of UFO craft arrayed as a “constellation” may be an intentional communication in the context of the Mayan calendar predictions. The content of the UFO communication could be its context. By the principles of dream interpretation, one interpretation of the “UFO formation-constellation” content is: “The Mayan prophecies are now operative.” I am sure you yourself can develop a whole list of alternative interpretations of the Sixth Sun UFO formation-constellation message.

We can analyze the 1991 Sixth Sun UFO flap as a phenomenon which is meaningfully related to the Mayan calendar prophecies. What is more, our Mayan calendar analysis is consistent with any of the alternative Interpretations of the underlying UFO phenomenon itself, as a dimensional, extraterrestrial, electromagnetic, or human-military phenomenon.

For example, suppose the intelligence behind the 1991 Sixth Sun UFO flap is on the order of a mega-intelligence that is multi-dimensional. That UFO intelligence could create the UFO flap through advanced electromagnetic technology, and use the 1991 flap as a peripheral cue to condition humankind into the concepts of cosmic consciousness and Earth changes. Alternatively, if the intelligence behind the UFO flap were extraterrestrial, it would use its UFO craft as peripheral cues for the same purpose of psychologically reinforcing cosmic consciousness and Earth changes awareness.

Suppose the UFO flap is a purely physical phenomenon, created by random electromagnetic energy, perhaps related to the total solar eclipse. Still, the UFO flap would be an example of synchronicity, and related in meaning to the Maya calendar. The concept of synchronicity, as articulated by psychologist Carl Jung, holds that meaning is a dimension in the universe, much as other dimensions such as space and time. Even if the 1991 UFO flap were created by random electromagnetic energy, it may nevertheless be related in time, space, and meaning to the Mayan calendar, if the context and content of the UFO flap and the Mayan calendar are integrally linked.

Prophecy may be fulfilled by random, meaningful events.

Finally, suppose the 1991 UFO Sixth Sun flap were actually a disinformation

operation using secret military craft (this seems doubtful, if reports of 40 UFOs flying in constellation formation are accurate). This would assume that the military intelligence directing the UFO secret craft had designed a flap in fulfillment of the Mayan Sixth Sun prophecy. It would also assume that the military intelligence behind the UFO is Gaia-conscious, which may well not be the case. As we have seen, intentional human action can fulfill prophecy, as in the Edgar Cayce-predicted Poseidia findings off of Bimini in 1969. If the 1991 Sixth Sun flap were in fact a secret military operation, this intentional human intervention would still be the functional equivalent of a fulfillment.

Whatever its actual origin, the 1991 Sixth Sun UFO phenomena are a living confirmation of the Maya calendar and its prophesized events, vividly activating and quickening our collective consciousness of humankind's twin path – cosmic consciousness and Earth changes.

We now can come full circle back to where we started – prophesized Earth changes brought about by environmental warfare.

Well, the effects of destructive electromagnetic energy on the Earth's systems may trigger the Earth changes predicted by the Mayan calendar for the end of the long count in 2012. The Mayan age of Earthquake which starts in 2012 AD may result from the electromagnetic energy released by solar activity (sunspot cycle), and the electromagnetic energy released by Environmental weapons and nuclear explosions.

Mayan cosmologist Jose Arguelles has developed an advanced theoretical framework for understanding both the UFO phenomenon and the effects of Environmental warfare, within the context of the Mayan calendar. Arguelles integrates the cycles of evolution of the Mayan calendar with concept that the intelligence behind UFOs may be actually a dimensional being.

"[Extraterrestrials, UFOs, the "space brothers" - these are not alien entities, but emanations of /being/ itself. And being is, in its essence, light, radiant energy. During the time that we have spun our historical tale, we have been participating in the unfoldment of a larger being. But by the very nature of the phase of the 5,125-year/5,200-tun galactic synchronization beam in which we have been involved, we have lost sight of this fact.

“Spun through the increasingly accelerated phases of the thirteen cycles of this beam (called "baktun" by the Maya), our planet has arrived at an advanced stage of conscious synchronization of component elements. This has been brought about by the most complex forms of DNA, inducing an artificial leap - the sprawl of civilization - which in actuality had one goal - the quickening of the transformation of matter. This is the critical significance of the 13th cycle, Baktun 12, A.D.1618-2012.

The first detonation of atomic energy in the Trinity Test of July 16, 1945 is a watershed event within this last baktun cycle. The Trinity Test both releases the first of a literal flood of destructive electromagnetic energy into the Earth's environment, and triggers a process of polarization of consciousness in our human species.

“Once this critical transformation of matter was attained on July 16, 1945 [Trinity Test – date of first testing of atomic bomb at Trinity, New Mexico], two basic processes were set in motion. One involved the materialist aggrandizement of power represented by the entrenchment of the prevalent global industrial-social order; the other involved the dissonant quickening of the resonant field of the planet resulting in a wide spectrum of effects from UFO sightings to increased psychism to tectonic plate shifts and terrorism.

“The reason for the intense subjective effects experienced by the human psyche lies in the overall impact of radioactivity and electromagnetic pollution on the infrastructure of DNA, causing increased randomness and entropy of behavior. But this response of DNA experienced as socially disruptive behavior in the human realm, inclusive of rises in the incidence of cancer and new diseases like AIDS, is actually only a complement of what is occurring in the larger host organism, Earth.”

Arguelles describes the Earth-system mechanisms by which destructive forces predicted by the Mayan calendar can ultimately cause cataclysmic Earth changes, including “a shattering of the planetary form.”

Electromagnetic energy is a central mechanism to these prophecies. These destructive forces include electromagnetic energy from nuclear explosions and environmental weapons.

“The resonant body of Earth, the vibratory infrastructure that literally holds together the sense-perceptible body of Earth, is in a condition of intense ‘fever’ called resonant dissonance. Remembering that the planets function as gyroscopes holding the frequency pattern of their particular orbits, we see that environmentally impactful events since 1945 have actually set in motion a dissonant vibratory wave affecting the overall spin of the planet. If the dissonance were not checked, then, similar to an uncontrolled nuclear reaction, the end-result would be the development of a wobble in the spin and a consequent shattering of the planetary form.

“In order to accommodate the increased dissonance of frequency, wave adjustments are set off at the crystalline core of the Earth until a new harmonic resonance of slightly higher frequency is attained, thus accommodating the dissonance and stabilizing at a new level of resonance. If this new level can be attained before further destructive impacts are inflicted upon the planetary field - whether as increased co2 or further nuclear testing

- then the planet will have successfully charted the 5,200-tun synchronization beam."

Maya calendar scholar John Major Jenkins has criticized Arguelles' attempts to derive a modified Dreamspell calendar based upon the original Mayan calendar itself. I do not believe Jenkins' criticisms, which are directed at the modified calendar, diminish Arguelles' insights into the significance of Earth changes and of UFO phenomena predicted by the original calendar.

"Dreamspell is a perfect example of how indigenous handiwork gets appropriated, misrepresented and distorted. This has been a controversial issue: the opportunistic and disrespectful selling of sacred indigenous traditions. The key words here are misrepresented and disrespectful. In Dreamspell literature, now widely available on the World Wide Web and thus influencing people around the world, the unique and creative perspective developed by visionary channeler Jose Arguelles is being promoted as the Mayan calendar. As some kind of measure of authority in these matters, he claims to channel the spirit of the great ruler of Palenque, Pacal. If Jose's new perspectives were presented as new perspectives, derived from Mayan tradition, there would be a lot less to complain about here. However, it is simply deplorable that Dreamspell is spewing its distorted derivations around the world and labeling them the real thing. This is bad enough, and it gets worse."

I do not feel competent to judge these issues. I myself was co-host and producer of a live radio program, broadcast to public radio stations in the U. S., meant to celebrate the Harmonic Convergence of August 16-17, 1987, an important prophetic date on the Mayan calendar, according to Arguelles.

Arguelles' observations about the effects on the Earth system of electromagnetic energy released by nuclear warfare and testing since the advent of Trinity Test on July 16, 1945 are consistent with public interest research data showing that Earth seismicity has significantly increased in the nuclear age. The mechanism of this increased seismicity is most probably electromagnetic energy released by nuclear explosions. Nuclear explosions release electromagnetic energy, which distorts the magnetic fields of the Earth, twisting them, tilting the Earth, and causing tectonic activity. There may be resonant frequencies activated in the Earth's surface as well, activating tectonic shifts and contribute to increased seismicity.

Earth Changes

The Mayan calendar suggests two outcomes of the end-beginning cycle starting December 22, 2012. These are Earth changes and cosmic consciousness. Both of these may be the outcomes of the same set of forces,

converging simultaneously on our Earth.

Remember the principle we have may have discovered: Human intervention can fulfill prophecy, of itself or in concert with other forces.

Let's evaluate the electromagnetic forces that may converge to the trigger cataclysmic Earth changes predicted by the Mayan calendar for the end-cycle of the Long Count, starting in 2012.

Solar activity (sunspot cycles) is one of the forces may create a critical field of Earth disturbance. Mini-cycles of solar activity (sunspots) occur approximately every 11.5 years, and the next sunspot cycle scheduled following the 2001-2001 cycle occurs during 2012.

“As the current solar cycle ('Cycle 23') ascends, as part of an 11-year cycle estimated to peak between mid-2000 and early-2001, so does solar activity such as sunspots and solar flares.

“Solar flares, an intense temporary release of high-energy particles (from visible light to radio waves, and gamma- and x- rays), usually occur near sunspots, and may be associated with 'coronal mass ejections' (or CMEs). Flares are categorized into three groups, the lowest being the C-class flare. A M-class flare, which usually produces shortwave fadeout in the daylight hemisphere of Earth, is between the C-class and the X-class flare. X-class flares are very energetic events that definitely produce a shortwave fadeout in the daylight hemisphere of Earth.

“CMEs, which can also occur independently, are streams of gas and magnetic fields that can contain a billion tons of matter, accelerating at several million miles per hour into interplanetary space...

“Scientists have found that magnetic disturbances are more probable around the equinox months.

“About 15% of incoming radiation is absorbed by the atmosphere, and the potentially most dangerous gamma- and x-rays are mostly absorbed by the ionosphere. Ultraviolet radiation is generally absorbed by the Ozone layer, although what UV rays do get through contribute to such things as skin cancer and it is believed they affect a diversity of life, including plants, amphibian eggs and even single-celled organisms.”

Prophecy researcher Peter Petrisko notes that the mini-cycles of solar activity (sunspots) have been plotted for the last 300 years and none has triggered Earth changes of a cataclysmic scale.

While some have prophesied an all-encompassing, life-ending flare or ejection, a few points should be noted. First, in the 300 or so years of recorded solar activity, no such event has occurred (not even during the most intense 'Cycle 19' of the late 50s). Lastly, at known levels, even if in an aircraft at extremely high altitudes, the amount of radiation one would absorb would be akin to that of an x-ray machine at the doctor's office.

However, solar electromagnetic activity can disrupt and twist Earth's electromagnetic fields, in turn leading to seismic activity. This linkage between increased solar activity, twisting of the Earth's magnetic field, and increased seismicity is a potential mechanism of Earth changes. If the effects of solar activity on the Earth's magnetic field, and on tectonic structures are large enough, Earth changes of a large scale could occur.

“If directed at the Earth, these solar materials can buffet the planet's magnetosphere, which results in geomagnetic activity. This activity is a natural variation in the Earth's geomagnetic field, and is classified into quiet, unsettled, active and storm conditions. A geomagnetic storm may occur 1 to 3 days after a large solar flare, and CMEs may be associated with a disturbance in the planet's magnetic field or ionosphere.

From the perspectives of the Mayan calendar, and of some observers of solar activity, the sunspot cycle of 2012 AD may be vastly different in nature and scale from the 11.5-year sunspot cycles that have been observed for the last 300 years.

Researcher Maurice Cotterell has analyzed the patterns of sunspot cycles going back for the 18,139 years of the grand solar cycle. He notes that the sun's magnetic field has shifted five (5) times during this grand cycle.

“This means that the [Sun's magnetic field] shifts five times during every 18,139-year grand cycle. The sun's magnetic field shifts after 3740 years, again after 3553 years, again after 3553 years, and again after 3740 years, and finally for the fifth time after 3553 years during the grand cycle.”

The Sun's magnetic field shifts for its fifth and final time around 2012, the end of this grand solar cycle. This shift in the solar magnetic field corresponds roughly to the end of the current grand cycle of the Mayan calendar on December 22, 2012. This fifth sunspot cycle is approximately 1,366,040 days long. This end-cycle of the Mayan calendar is almost conterminous with the solar activity (sunspot), and is 1,366,560 days long, when corrected for calendar variances.

Cotterell notes this correlation in end-cycle shifts in the Sun's magnetic field and the Mayan cosmology that Earth changes at the end of each Mayan calendar Long Count. He speculates that this end-cycle shift in the Sun's magnetic field may be the mechanism for the Mayan account of the four prior destructions of the Earth, and the possible fifth destruction, starting in 2012 AD the end of the current Long Count.

“It was this last period of 1,366,040 days [the sunspot mega-cycle] that was in Cotterell's mind when he first read about the Mayan super-number of 1,366,560 days [the Long Count cycle) recorded in the Dresden Codex. It seemed too similar to be a coincidence. What is more, his division of the greater period of reversals of the sun's polarity seemed to mirror the Mayan

conception of earlier ages. They like his data, indicated there had been four earlier ages before our own. It seemed what they [the Maya] were talking about was the shifting or reversal of the sun's magnetic field. Could this be the mechanism behind the collapse of one age and the start of another? .

So, what does this mean in relation to predicted Earth changes?

It means that we have identified a possible mechanism for Earth changes as prophesized in the Mayan calendar - a reversal in the magnetic field of the Sun, somewhere in a time window around 2012. A reversal in the Sun's magnetic field can be predicted from the larger solar sunspot end-cycle to occur in the 2012 time window. The Mayan calendar indicates the end of the Mayan Long Count cycle is also in 2012. If Cotterell's speculations are correct, the four prior reversals of the Sun's magnetic field the current grand solar cycle may correspond to the four prior "destructions" of the Earth held by the Mayan cosmology. The end of the Mayan Long Count on December 22, 2012 may coincide with a reversal of the Sun's magnetic field, which has occurred four times earlier during the end of a sunspot mega-cycle.

Now we can see a basis for reasoning that the effects of solar activity occurring around 2012 AD may be of a vastly different scale and degree than the effects experienced during the "normal" 11.5 year sunspot mini-cycles we have been measuring for the last 300 years. If the Sun's magnetic field is greatly disturbed or does reverse during the 2012 AD time window, the impact of the Earth's magnetic field could be such as to create Earth changes of a cataclysmic scale.

One mechanism of these Earth changes could be a devastating distortion and twisting of the Earth's electromagnetic field by the Sun's reversal of magnetic polarity. This twisting of the Earth's magnetic field in turn would tend to tilt the Earth, throwing its tectonic plates out of balance, and triggering large-scale tectonic activity – Earth changes. Conceivably, the Earth changes could include changes in surface landmasses and ocean. If the surface distribution of Earth mass were to shift significantly, a shifting of the Earth around its core would be theoretically possible. A reversal of the Earth's magnetic poles is also possible, and has occurred historically. Cotterell integrates (1) the science of solar magnetic field shifts and (2) the cosmology of cyclical Earth destruction under Mayan calendar.

"When the sun's magnetic field shifts direction, it tends to twist the Earth off its axis. The tilting Earth is subjected to Earthquakes, floods, conflagrations and volcanic eruptions.

"The sun's magnetic field shifts five times every long cosmic cycle. This would seem to be the reason that the Maya and others believed that the Earth has been destroyed four times in the past, and that destruction at the beginning of the 21st century in this, the fifth age of the sun, will follow in

the same way.”

Is Cotterell’s brilliant breakthrough correlating great solar cycles with the Mayan Long Count end-cycles science or pseudo-science? I say it is science. I say the burden of proof now lies on the Earth sciences to show cause why we have not been warned about the possible Earth changes of the 2012 AD time window. If such cataclysmic changes in the Sun’s magnetic field and on the Earth itself may occur sometime after the 2012 AD time window, why is modern Earth science so oblivious to the possibility of this scale of destruction? Rudimentary principles of risk assessment would require that a vulnerability analysis of the impacts on Earth of a possible reversal of the Sun’s magnetic field.

That has not occurred? Why?

One answer may lie in the perceptual blinders of the modern scientific method.

Perhaps our civilization will shed its perceptual blinders with the cosmic consciousness of new Mayan cycle.

But we get ahead of ourselves. Let us return to the subject of Earth changes and human warfare, that prime economic activity and technological focus of our current human civilization.

There is a key question we must address in order to discover the potential meaning of contemporary Environmental weapons in the light of the Mayan end-cycle in 2012 AD.

That key question is a matter of simple logic.

What can be the Earth changes effects of environmental, electromagnetic warfare in the period leading up to, and during intense electromagnetic shifts brought about by a possible reversal of the Sun’s magnetic fields around 2012 AD?

Aha!

Welcome, skeptics and seers alike, let us reason together.

We have seen that there is a strong correlation between nuclear weapons testing and deterioration in the Earth’s electromagnetic field. The mechanism of this deterioration is most probably the electromagnetic energy released into the Earth’s atmosphere and magnetosphere. Nuclear weapons, in fact, function as environmental electromagnetic weapons, and may have been consciously used as such by nations testing them.

Now, let us turn to the possible Earth changes effects of new generation of Environmental weapons. These are weapons designed to deliver highly charged electromagnetic energy for designated purposes. Some electromagnetic weapons are designed for “mind control” purposes.

“Environmental weapons” are those using Earth systems such as weather and climate to inflict destruction upon a military enemy. Both mind control weapons and environmental weapons employ electromagnetic energy, and

may trigger Earth changes consequences for our planet.

With regard to environmental weapons, researcher and activist Dr. Nick Begich notes:

“Over the last several years Earthpulse has been investigating the latest developments in technology. We explore subjects related to improving the human condition and expose projects which we believe are risky and unnecessary. This essay is about some of the science being developed and contemplated by military planners and others that could profoundly effect our lives. The intent of this essay is to focus discussion on these new systems by bringing them into the light of day.

“Is it possible to trigger Earthquakes, volcanic eruptions or weather changes by man-made activities? Is it possible to create and direct balls of energy at lightning speeds, to destroy an enemy? Is it possible to manipulate the behavior, and even the memories, of people using specialized technologies? The United States military and others believe that this is the case. Many of these systems are well on their way to being used in the battlefield.”

Dr. Begich specifically describes environmental weapons:

“Manipulating the Environment

“There has been a good deal of speculation about the possibilities of creating artificial weather and of controlling the weather. This is not new and has been the subject of on-going military research for decades. Moreover, in 1976 the United States signed international treaties calling for a ban on "geophysical warfare".

“The use of new weapons is not limited to governments and sophisticated science laboratories. In April 1997, the United States Secretary of Defense, William Cohen made the following comment:

“Others are engaging even in an eco-type of terrorism whereby they can alter climate, set off Earthquakes, volcanoes remotely through the use of electromagnetic waves.’

“This is not new either but has its roots in 1960-70's era research by American scientists and continues to appear in numerous articles and reports. The idea of creating artificial weather including cyclones is being explored. In a recent article in the Wall Street Journal it was reported that ‘a Malaysian company, BioCure Sdn. Bhd., will sign a memorandum of understanding

soon with a government-owned Russian party to produce the Cyclone.' The deal with the Russians was set up so that if the technology did not work the Malaysians did not have to pay for the attempt. There have been other reports of Russian research into this area.

“Photon Torpedoes

“What else might be on the way? In a 1989 patent a most interesting bit of science is revealed. The development of new energy weapons has occupied the imaginations and resources of our national and private laboratories. One such weapon idea is owned by the United States Department of Energy. It is a new kind of weapon that allows electromagnetic or acoustic energy to be focused into a tight package of energy that can be projected over great distances without dissipating. When scientists think of this energy being projected through the air it was always assumed that the energy would dissipate, dispersing at such a rapid rate that no weapon's effect could be realized.

“What has been discovered is that there is a way to create such a system. In a U. S. patent the following summary appears:

”The invention relates generally to transmission of pulses of energy, and more particularly, to the propagation of localized pulses of electromagnetic or acoustic energy over long distances without divergence....’

“The patent describes the energy effect as ‘electromagnetic missiles or bullets’ which could destroy almost any object in their path.”

Probably the most well known environmental weapons system is HAARP, operated by the United States military. In submitting their comments for the Environmental Impact Statement for HAARP, major U.S. environmental groups stated, in 1996, that new developments about HAARP had come to light, requiring an expanded statement.

Functionally, these new developments relate mainly to HAARP’s potential for Environmental warfare:

“If there remains a "major federal action" to occur, and if the new information is sufficient to show that the remaining action will "affect the quality of the human environment" in a significant manner or to a significant extent not already considered, a supplemental . . . [impact statement] must be prepared.

“II. Factual Background

“As you know, in late 1993, the Air Force, in cooperation with the Navy, began construction of HAARP in Gakona, Alaska. The main element of HAARP is a large radio wave transmitter which "utilize[s] powerful, high frequency (HF) transmissions and a variety of associated observational instruments to investigate naturally occurring and artificially induced ionospheric processes that support, enhance or degrade the propagation of radio waves." ROD at 1. Construction of the HAARP facility is currently scheduled to be completed within six or seven years and presently it runs at about ten percent of projected power levels. See O'Harra, HAARP's Mixed Signals; Solid Research Or Menace To Alaskans, Anchorage Daily News (April 7, 1996).

“As the Air Force originally explained, HAARP is aimed at studying the ionosphere, ‘with particular emphasis placed on being able to better understand and use it to enhance communications and surveillance systems for both civil and defense purposes.’ FEIS Vol. I at iii. As an example, one touted potential military benefit from the project is the development of a communication system for use with submerged submarines.

“The Air Force, in the FEIS, detailed its view of the impacts of the project. The Air Force focused almost exclusively on the local and regional impacts of HAARP, primarily on things such as impacts to animals, degradation of air quality and vegetation loss due to construction activities. FEIS at 3-1 to 3-165. The Air Force deemed HAARP's effects to the atmosphere and biological effects to be non-existent or insignificant. See id; see also ROD at Table 2.4-1. The only admitted potentially significant impact is ‘interference to radio communication systems and electro-explosive devices during transmitting periods.’ Id.

“In the years since the EIS process was completed, several groups and individuals have raised questions concerning the uses to which HAARP will be put and the likely effects flowing from those uses. Some of these assertions are set forth in a book, published in 1995, called “Angels Don't Play This HAARP”. Manning, Begich, Earthpulse Press (1995).¹ In this book, the authors set forth a detailed and fully-referenced description of HAARP and its potential uses and effects. During the course of their research for the book, the authors found that, rather than the innocuous project described by the Air Force, HAARP represents a technology which could lead to a new class of weapons that could change our world profoundly – an all-purpose military tool. If misused, the tool could mess up the weather. It

could be used against humanity in a way that would change what people think, believe and feel.

[HAARP could]:

manipulate global weather;
hurt ecosystems;
knock out electronic communications; or
change our moods and mental states.

“A detailed recitation in this discussion of the assertions and facts contained in “Angels Don't Play This HAARP” would serve no useful purpose; the book stands on its own as a question mark affixed to the Air Force's contrary description of the uses and effects of HAARP.² As set out below, this request is based upon questions and concerns about HAARP raised by facts surrounding both the Air Force's current intended uses for the project and scientific evidence raising questions about HAARP's effects.”

HAARP was not developed in isolation. Dr. Rosalie Bertell of Toronto, Ontario, concludes that HAARP was developed by the U.S. military as part of an established program of electromagnetic weapons, for application in Environmental warfare.

“It would be rash to assume that HAARP is an isolated experiment which would not be expanded. It is related to fifty years of intensive and increasingly destructive programs to understand and control the upper atmosphere.

“It would be rash not to associate HAARP with the space laboratory construction which is separately being planned by the United States. HAARP is an integral part of a long history of space research and development of a deliberate military nature.

“The military implications of combining these projects is alarming. Basic to this project is control of communications, both disruption and reliability in hostile environments. The power wielded by such control is obvious.

“The ability of the HAARP / Spacelab/ rocket combination to deliver very large amount of energy, comparable to a nuclear bomb, anywhere on Earth via laser and particle beams, are frightening.

“The project is likely to be "sold" to the public as a space shield against incoming weapons, or, for the more gullible, a devise for repairing the ozone

layer.”

Because of its implications for influencing predicted Earth changes, I think it is useful to thoroughly review the history of the development of environmental warfare. Dr. Bertell's review of the 35-year history of environmental weapons development preceding HAARP is a chilling one. “Prepared by Military interest in space became intense during and after World War II because of the introduction of rocket science, the companion to nuclear technology. The early versions include the buzz bomb and guided missiles. They were thought of as potential carriers of both nuclear and conventional bombs.

“Rocket technology and nuclear weapon technology developed simultaneously between 1945 and 1963. During this time of intensive atmospheric nuclear testing, explosions at various levels above and below the surface of the Earth were attempted. Some of the now familiar descriptions of the Earth's protective atmosphere, such as the existence of the Van Allen belts, were based on information gained through stratospheric and ionospheric experimentation.

“The Earth's atmosphere consists of the troposphere, from sea level to about 16 km above the Earth's surface; the stratosphere (which contains the ozone level) which extends from about the 16 to 48 km above the Earth; and the ionosphere which extends from 48 km to over 50,000 km above the surface of the Earth.”

“The Earth's protective atmosphere or "skin" extends beyond 3,200 km above sea level to the large magnetic fields, called the Van Allen Belts, which can capture the charged particles sprayed through the cosmos by the solar and galactic winds. These belts were discovered in 1958 during the first weeks of the operation of America's first satellite, Explorer I. They appear to contain charged particles trapped in the Earth's gravity and magnetic fields. Primary galactic cosmic rays enter the solar system from interstellar space, and are made up of protons with energies above 100 MeV, extending up to astronomically high energies. They make up about 100 percent of the high-energy rays. Solar rays are generally of lower energy, below 20 MeV (which is still high energy in Earth terms). These high-energy particles are affected by the Earth's magnetic field and by geomagnetic latitude (distance above or below the geomagnetic equator). The flux density of low energy protons at the top of the atmosphere is normally greater at the poles than at the equator. The density also varies with solar activity, being at a minimum when solar flares are at a minimum.

“The Van Allen belts capture charged particles (protons, electrons and alpha particles) and these spiral along the magnetic force lines toward the Polar Regions where the force lines converge. They are reflected back and forth between the magnetic force lines near the poles. The lower Van Allen Belt is about 7700 km above the Earth's surface, and the outer Van Allen Belt is about 51,500 km above the surface. According to the Encyclopedia Britannica, the Van Allen belts are most intense along the equator, and effectively absent over the poles. They dip to 400 km over the South Atlantic Ocean, and are about 1,000 km high over the Central Pacific Ocean. In the lower Van Allen Belt, the proton intensity is about 20,000 particles with energy above 30 MeV per second per square centimeter. Electrons reach a maximum energy of 1 MeV, and their intensity has a maximum of 100 million per second per square centimeter. In the outer Belt, proton energy averages only 1 MeV. For comparison, most charged particles discharged in a nuclear explosion range between 0.3 and 3 MeV, while diagnostic medical X-ray has peak voltage around 0.5 MeV.

Project Argus (1958)

“Between August and September 1958, the US Navy exploded three fission type nuclear bombs 480 km above the South Atlantic Ocean, in the part of the lower Van Allen Belt closest to the Earth's surface. In addition, two hydrogen bombs were detonated 160 km over Johnston Island in the Pacific. The military called this "the biggest scientific experiment ever undertaken." It was designed by the US Department of Defense and the US Atomic Energy Commission, under the code name Project Argus. The purpose appears to be to assess the impact of high altitude nuclear explosions on radio transmission and radar operations because of the electromagnetic energy, and to increase understanding of the geomagnetic field and the behavior of the charged particles in it.

“This gigantic experiment created new (inner) magnetic radiation belts encompassing almost the whole Earth, and injected sufficient electrons and other energetic particles into the ionosphere to cause worldwide effects. The electrons traveled back and forth along magnetic force lines, causing an artificial "aurora" when striking the atmosphere near the North Pole.

“The US Military planned to create a "telecommunications shield" in the ionosphere, reported in 13-20 August 1961, Keesings Historisch Archief (K. H.A.). This shield would be created "in the ionosphere at 3,000 km height, by bringing into orbit 350,000 million copper needles, each 2-4 cm long [total weight 16 kg], forming a belt 10 km thick and 40 km wide, the needles spaced about 100 m apart." This was designed to replace the ionosphere "because telecommunications are impaired by magnetic storms and solar

flares." The US planned to add to the number of copper needles if the experiment proved to be successful. This plan was strongly opposed by the Intentional Union of Astronomers.

Project Starfish (1962)

"On July 9, 1962, the US began a further series of experiments with the ionosphere. From their description: "one kiloton device, at a height of 60 km and one megaton and one multi-megaton, at several hundred kilometers height" (K.H.A., 29 June 1962). These tests seriously disturbed the lower Van Allen Belt, substantially altering its shape and intensity. "In this experiment the inner Van Allen Belt will be practically destroyed for a period of time; particles from the Belt will be transported to the atmosphere. It is anticipated that the Earth's magnetic field will be disturbed over long distances for several hours, preventing radio communication. The explosion in the inner radiation belt will create an artificial dome of polar light that will be visible from Los Angeles" (K.H.A. 11 May 1962). A Fijian Sailor, present at this nuclear explosion, told me that the whole sky was on fire and he thought it would be the end of the world. This was the experiment that called forth the strong protest of the Queen's Astronomer, Sir Martin Ryle in the UK.

"The ionosphere [according to the understanding at that time] that part of the atmosphere between 65 and 80 km and 280- 320 km height, will be disrupted by mechanical forces caused by the pressure wave following the explosion. At the same time, large quantities of ionizing radiation will be released, further ionizing the gaseous components of the atmosphere at this height. This ionization effect is strengthened by the radiation from the fission products... The lower Van Allen Belt, consisting of charged particles that move along the geomagnetic field lines... will similarly be disrupted. As a result of the explosion, this field will be locally destroyed, while countless new electrons will be introduced into the lower belt" (K.H.A. 11 May 1962). "On 19 July... NASA announced that as a consequence of the high altitude nuclear test of July 9, a new radiation belt had been formed, stretching from a height of about 400 km to 1600 km; it can be seen as a temporary extension of the lower Van Allen Belt" (K.H.A. 5 August 1962).

"As explained in the Encyclopedia Britannica: ‘.. Starfish made a much wider belt [than Project Argus] that extends from low altitude out past L=3 [i. e. three Earth radiuses or about 13,000 km above the surface of the Earth].’ Later in 1962, the USSR undertook similar planetary experiments, creating three new radiation belts between 7,000 and 13,000 km above the Earth.

According to the Encyclopedia, the electron fluxes in the lower Van Allen Belt have changed markedly since the 1962 high- altitude nuclear explosions by the US and USSR, never returning to their former state. According to American scientists, it could take many hundreds of years for the Van Allen Belts to restabilize at their normal levels. (Research done by: Nigel Harle, Borderland Archives, Cortenbachstraat 32, 6136 CH Sittard, Netherlands.)

SPS: Solar Power Satellite Project (1968)

“In 1968 the US military proposed Solar Powered Satellites in geostationary orbit some 40,000 km above the Earth, which would intercept solar radiation using solar cells on satellites and transmit it via a microwave beam to receiving antennas, called rectennas, on Earth. The US Congress mandated the Department of Energy and NASA to prepare an Environmental Impact Assessment on this project, to be completed by June 1980, and costing \$25 Million. This project was designed to construct 60 Solar Powered Satellites over a thirty year period at a cost between \$500 and \$800 thousand million (in 1968 dollars), providing 100 percent of the US energy needs in the year 2025 at a cost of \$3000 per kW. At that time, the project cost was two to three times larger than the whole Department of Energy budget, and the projected cost of the electricity was well above the cost of most conventional energy sources. The rectenna sites on Earth were expected to take up to 145 square kilometers of land, and would preclude habitation by any humans, animals or even vegetation. Each Satellite was to be the size of Manhattan Island.

Saturn V Rocket (1975)

“Due to a malfunction, the Saturn V Rocket burned unusually high in the atmosphere, above 300 km. This burn produced "a large ionospheric hole" (Mendillo, M. Et al., Science p. 187, 343, 1975). The disturbance reduced the total electron content more than 60% over an area 1,000 km in radius, and lasted for several hours. It prevented all telecommunications over a large area of the Atlantic Ocean. The phenomenon was apparently caused by a reaction between the exhaust gases and ionospheric oxygen ions. The reaction emitted a 6300 A airglow. Between 1975 and 1981 NASA and the US Military began to design ways to test this new phenomena through deliberate experimentation with the ionosphere.

SPS Military Implications (1978)

“Early review of the Solar Powered Satellite Project began in around 1978,

and I was on the review panel. Although this was proposed as an energy program, it had significant military implications. One of the most significant, first pointed out by Michael J. Ozeroff, was the possibility of developing a satellite-borne beam weapon for anti-ballistic missile (ABM) use. The satellites were to be in geosynchronous orbits, each providing an excellent vantage point from which an entire hemisphere can be surveyed continuously. It was speculated that a high-energy laser beam could function as a thermal weapon to disable or destroy enemy missiles. There was some discussion of electron weapon beams, through the use of a laser beam to preheat a path for the following electron beam.

“The SPS was also described as a psychological and anti- personnel weapon, which could be directed toward an enemy. If the main microwave beam was redirected away from its rectenna, toward enemy personnel, it could use an infrared radiation wavelength (invisible) as an anti-personnel weapon. It might also be possible to transmit high enough energy to ignite combustible materials. Laser beam power relays could be made from the SPS satellite to other satellites or platforms, for example aircraft, for military purposes. One application might be a laser powered turbofan engine that would receive the laser beam directly in its combustion chamber, producing the required high temperature gas for its cruising operation. This would allow unlimited on-station cruise time. As a psychological weapon, the SPS was capable of causing general panic

“The SPS would be able to transmit power to remote military operations anywhere needed on Earth. The manned platform of the SPS would provide surveillance and early warning capability, and ELF linkage to submarines. It would also provide the capability of jamming enemy communications. The potential for jamming and creating communications is significant. The SPS was also capable of causing physical changes in the ionosphere

“President Carter approved the SPS Project and gave it a go- ahead, in spite of the reservation which many reviewers, myself included, expressed. Fortunately, it was so expensive, exceeding the entire Department of Energy budget, that funding was denied by the Congress. I approached the United Nations Committee on Disarmament on this project, but was told that as long as the program was called Solar Energy by the United States, it could not be considered a weapons project. The same project resurfaced in the US under President Reagan. He moved it to the much larger budget of the Department of Defense and called it Star Wars. Since this is more recent history, I will not discuss the debate that raged over this phase of the plan.

“By 1978, it was apparent to the US Military that communications in a

nuclear hostile environment would not be possible using traditional methods of radio and television technology (Jane's Military Communications 1978). By 1982, GTE Sylvania (Needham Heights, Massachusetts) had developed a command control electronic sub-system for the US Air Force's Ground Launch Cruise Missiles (GLCM) that would enable military commanders to monitor and control the missile prior to launch both in hostile and non-hostile environments. The system contains six radio subsystems, created with visible light using a dark beam (not visible) and is resistant to the disruptions experienced by radio and television. Dark beams contribute to the formation of energetic plasma in the atmosphere. This plasma can become visible as smog or fog. Some has a different charge than the sun's energy, and accumulates in places where the sun's energy is absent, like the Polar Regions in the winter. When the polar spring occurs, the sun appears and repels this plasma, contributing to holes in the ozone layer. This military system is called: Ground Wave Emergency Network (GWEN). (See The SECOMII Communication System, by Wayne Olsen, SAND 78- 0391, Sandia Laboratories, Albuquerque, New Mexico, April 1978.) This innovative emergency radio system was apparently never implemented in Europe, and exists only in North America.

Orbit Maneuvering System (1981)

“Part of the plan to build the SPS space platforms was the demand for reusable space shuttles, since they could not afford to keep discarding rockets. The NASA Spacelab 3 Mission of the Space Shuttle made, in 1981, "a series of passes over a network of five ground based observatories" in order to study what happened to the ionosphere when the Shuttle injected gases into it from the Orbit Maneuvering System (OMS). They discovered that they could "induce ionospheric holes" and began to experiment with holes made in the daytime or at night over Millstone, Connecticut, and Arecibo, Puerto Rico. They experimented with the effects of "artificially induced ionospheric depletions on very low frequency wave lengths, on equatorial plasma instabilities, and on low frequency radio astronomical observations over Roberval, Quebec, Kwajalein, in the Marshall Islands and Hobart, Tasmania" (Advanced Space Research, Vo1.8, No. 1, 1988).

Innovative Shuttle Experiments (1985)

“An innovative use of the Space Shuttle to perform space physics experiments in Earth orbit was launched, using the OMS injections of gases to "cause a sudden depletion in the local plasma concentration, the creation of a so called ionospheric hole." This artificially induced plasma depletion can then be used to investigate other space phenomena, such as the growth of

the plasma instabilities or the modification of radio propagation paths. The 47 second OMS burn of July 29, 1985, produced the largest and most long-lived ionospheric hole to date, dumping some 830 kg of exhaust into the ionosphere at sunset. A 6-second, 68-km OMS release above Connecticut in August 1985, produced an airglow that covered over 400,000 square km.

“During the 1980's, rocket launches globally numbered about 500 to 600 a year, peaking at 1500 in 1989. There were many more during the Gulf War. The Shuttle is the largest of the solid fuel rockets, with twin 45-meter boosters. All solid fuel rockets release large amounts of hydrochloric acid in their exhaust, each Shuttle flight injecting about 75 tons of ozone destroying chlorine into the stratosphere. Those launched since 1992 inject even more ozone-destroying chlorine, about 187 tons, into the stratosphere (which contains the ozone layer). Mighty Oaks (1986)

“In April 1986, just before the Chernobyl disaster, the US had a failed hydrogen test at the Nevada Test Site called Mighty Oaks. This test conducted far underground, consisted of a hydrogen bomb explosion in one chamber, with a leaded steel door to the chamber, two meters thick, closing within milliseconds of the blast. The door was to allow only the first radioactive beam to escape into the "control room" in which expensive instrumentation was located. The radiation was to be captured as a weapon beam. The door failed to close as quickly as planned, causing the radioactive gases and debris to fill the control room, destroying millions of dollars worth of equipment. The experiment was part of a program to develop X-ray and particle beam weapons. The radioactive releases from Mighty Oaks were vented, under a "licensed venting" and were likely responsible for many of the North American nuclear fallout reports in May 1986, which were attributed to the Chernobyl disaster.

Desert Storm (1991)

“According to Defense News, April 13 - 19, 1992, the US deployed an electromagnetic pulse weapon (EMP) in Desert Storm, designed to mimic the flash of electricity from a nuclear bomb. The Sandia National Laboratory had built a 23,000 square meter laboratory on the Kirkland Air Force Base, 1989, to house the Hermes II electron beam generator capable of producing 20 Trillion Watt pulses lasting 20 billionths to 25 billionths of a second. This X-ray simulator is called a Particle Beam Fusion Accelerator. A stream of electrons hitting a metal plate can produce a pulsed X-ray or gamma ray. Hermes II had produced electron beams since 1974. These devices were apparently tested during the Gulf War, although detailed information on

them is sparse.

High Frequency Active Auroral Research Program, HAARP (1993)

“The HAARP Program is jointly managed by the US Air Force and the US Navy, and is based in Gakona, Alaska. It is designed to "understand, simulate and control ionospheric processes that might alter the performance of communication and surveillance systems." The HAARP system intends to beam 3.6 Gigawatts of effective radiated power of high frequency radio energy into the ionosphere in order to:

- Generate extremely low frequency (ELF) waves for communicating with submerged submarines

- Conduct geophysical probes to identify and characterize natural ionospheric processes so that techniques can be developed to mitigate or control them

- Generate ionospheric lenses to focus large amounts of high frequency energy, thus providing a means of triggering ionospheric processes that potentially could be exploited for Department of Defense purposes,

- Electron acceleration for infrared (IR) and other optical emissions that could be used to control radio wave propagation properties

- Generate geomagnetic field aligned ionization to control the reflection/scattering properties of radio waves,

- Use oblique heating to produce effects on radio wave propagation, thus broadening the potential military applications of ionospheric enhancement technology.

Poker Flat Rocket Launch (1968 to Present)

“The Poker Flat Research Range is located about 50 km North of Fairbanks, Alaska, and it was established in 1968. It is operated by the Geophysical Institute with the University of Alaska Fairbanks, under NASA contract. About 250 major rocket launches have taken place from this site, and in 1994, a 16-meter long rocket was launched to help NASA "understand chemical reactions in the atmosphere associated with global climate change." Similar experiments, but using Chemical Release Modules (CRM), have been launched from Churchill, Manitoba. In 1980, Brian Whelan's "Project Waterhole" disrupted an aurora borealis, bringing it to a temporary halt. In February 1983, the chemical released into the ionosphere caused an aurora borealis over Churchill. In March 1989, two Black Brant X's and two Nike Orion rockets were launched over Canada, releasing barium at high altitudes and creating artificial clouds. These Churchill artificial clouds were observed

from as far away as Los Alamos, New Mexico.

“The US Navy has also been carrying on High Power Auroral Stimulation (HIPAS) research in Alaska. Through a series of wires and a 15-meter antenna, they have beamed high intensity signals into the upper atmosphere, generating a controlled disturbance in the ionosphere. As early as 1992, the Navy talked of creating 10-kilometer long antennas in the sky to generate extremely low frequency (ELF) waves needed for communicating with submarines. Another purpose of these experiments is to study the Aurora Borealis, called by some an outdoor plasma lab for studying the principles of fusion. Shuttle flights are now able to generate auroras with an electron beam. On November 10, 1991, an aurora borealis appeared in the Texas sky for the first time ever recorded, and it was seen by people as far away as Ohio and Utah, Nebraska and Missouri. The sky contained "Christmas colors" and various scientists were quick to blame it on solar activity. However, when pressed most would admit that the ionosphere must have been weakened at the time, so that the electrically charged particle hitting the Earth's atmosphere created the highly visible light called airglow. These charged particles are normally pulled northwards by the Earth's magnetic forces, to the magnetic north pole. The Northern Lights, as the aurora borealis is called, normally occurs in the vortex at the pole where the energetic particles, directed by the magnetic force lines, are directed.

Others speak of the proliferation of environmental weapons.

“But with (HAARP's) beam-steering, the pulsing capabilities, and maybe some instigation from secret organizations or counter-proliferation groups within the U. S. government, there could be some bad effects.”

The adverse human health effects of environmental weapons are also a concern.

“Possible effects of future HAARP fields on living systems is a concern that should be discussed, Dr. Flanagan told the committee. "One of the purposes of HAARP is to develop ELF (extremely low frequency) capability, for transmitting high-energy ELF waves, from .001 HZ all the way up to 40 Kilohertz, as described in (the military's) literature.”

“In the meantime, new research by other scientists shows that ELF signals may have profound effects on living organisms. Dr. Flanagan cited the example of known effects of ELF on the Circadian rhythms, which is the biological clock, of all living organisms including humans.

Importantly, an international constituency against environmental weapons is beginning to build.

“Individual members of the European Parliament are among the growing number of people worldwide who have been startled to hear about HAARP. Voices expressing various levels of concern are being heard in many countries. For example, in contrast with the cautiously worded comment of Dr. Bertell, a Germany-based researcher in the field of quantum electrodynamics, Al Zielinski, paints an apocalyptic word-picture. (He says HAARP technology could trigger a disaster with a global impact - electromagnetic waves causing destruction "when interacting with protective layers of the Earth and its gravitational field".)

Two historical newspaper (New York Times) interviews with inventor Nicola Tesla – one in 1915 and one in 1940 – set a prescient theoretical vision of the forces now driving the development and deployment of environmental weapons.

Tesla is quoted in a New York Times article of December 8, 1915

"Nikola Tesla, the inventor, has filed patent applications on the essential parts of a machine, possibilities which test a layman's imagination and promise a parallel of Thor's shooting thunderbolts from the sky to punish those who had angered the gods...Suffice it to say that the invention will go through space with a speed of 300 miles a second, a manless ship without propelling engine or wings sent by electricity to any desired point on the globe on its errand of destruction, if destruction its manipulator wishes to effect."

'It is not a time,' said Dr. Tesla yesterday, 'to go into the details of this thing. It is founded upon a principle that means great things in peace; it can be used for great things in war. But I repeat, this is no time to talk of such things.'

'It is perfectly practicable to transmit electrical energy without wires and produce destructive effects at a distance. I have already constructed a wireless transmitter which makes this possible, and have described it in

my technical publications, among which I refer to my patent number 1,119,732 recently granted. With transmitters of this kind we are enabled to project electrical energy in any amount to any distance and apply it for innumerable purposes, both in war and peace. Through the universal adoption of this system, ideal conditions for the maintenance of law and order will be realized, for then the energy necessary to the enforcement of right and justice will be normally productive, yet potential, and in any moment available, for attack and defense. The power transmitted need not be necessarily destructive, for, if distance is made to depend upon it, its withdrawal or supply will bring about the same results as those now accomplished by force of arms.'

Tesla continues this theme in a second article in the New York Times, on September 22, 1940.

"Nikola Tesla, one of the truly great inventors, who celebrated his eighty-fourth birthday on July 10, tells the writer that he stands ready to divulge to the United States government the secret of his 'teleforce', with which, he said, airplane motors would be melted at a distance of 250 miles, so that an invisible Chinese Wall of Defense would be built around the country..."

"This 'teleforce', he said, is based upon an entirely new principle of physics that 'no one has ever dreamed about', different from the principle embodied in his inventions relating to the transmission of electrical power from a distance, for which he has received a number of basic patents. This new type of force, Mr. Tesla said, would operate through a beam one hundred-millionth of a square centimeter in diameter, and could be generated from a special plant that would cost no more than \$2,000,000 and would take only about three months to construct."

"The beam, he states, involves four new inventions, two of which already have been tested. One of these is a method and apparatus for producing rays 'and other manifestations of energy' in free air, eliminating the

necessity for a high vacuum; a second is a method and process for producing 'very great electrical force'; the third is a method for amplifying this force and the fourth is a new method for producing 'a tremendous electrical repelling force'. This would be the projector, or gun, of the system. The voltage for propelling the beam to its objective, according to the inventor, will attain a potential of 50,000,000 volts."

"With this enormous voltage, he said, microscopic electrical particles of matter will be catapulted on their mission of defensive destruction. He has been working on this invention, he added, for many years and has recently made a number of improvements in it."

Let's go back to our key question on Earth changes and Environmental weapons.

What could be the Earth changes effects of environmental, electromagnetic warfare in the period leading up to, and during intense electromagnetic shifts brought about by a possible reversal of the Sun's magnetic fields around 2012 AD?

A possible mechanism between the electromagnetic effects of environmental weapons and the triggering of Earth changes seems relatively straightforward, based on what we know the effects of electromagnetic energy emanating from nuclear testing has been. It is not scientifically credible that environmental weapons have no significant effects on vital Earth event systems, like its electromagnetic fields.

Environmental weapons may likely continue to distort and twist the electromagnetic field of the Earth. They may likely continue to increase the Earth's seismicity, its proneness to Earthquake. Electromagnetic energy from environmental weapons may, if of sufficient strength, induce significant Earth events on their own, by distorting the Earth's magnetic field and inducing tectonic tilt, or by inducing resonant and disruptive frequencies in the Earth surface itself.

Environmental weapon's harm to the Earth's magnetic field and to its tectonic balance may be cumulative. These weapons may cause a gradual and accumulating structural and dynamic distortion, building up as Environmental weapons are used over the years approaching and subsequent to the Mayan end-cycle.

We can think of three ways that environmental weapons may cause Earth changes predicted by the Mayan end-cycle for 2012.

One way - Human Environmental weapons may gradually distort the Earth's magnetic field, and exacerbating and predisposing the Earth changes triggered by a reversal of the Sun's magnetic field around 2012.

Second way - Human Environmental warfare during the Mayan solar magnetic reversal may itself trigger the prophesized Earth changes.

Third way - The Sun's magnetic field does not reverse or distort around 2012 AD, but human Environmental weapons themselves induce Earth changes, by distortion of the Earth's magnetic fields.

An aggravating factor in each of these scenarios would be Earth's collision with near-Earth-objects, such as asteroids.

What is a common element in each of these three Earth changes scenarios?

Human intervention is the common element. In each of these scenarios, human intervention in the form of environmental weapons is a causal factor in fulfilling the Maya prophecies of cataclysmic Earth changes.

Cosmic Consciousness

Let's delve more deeply into the possible linkages among Earth changes, Mayan end-cycle solar activity, and human intervention. Perhaps these linkages may lead us to insight into the second prophesized outcome of the Maya end-cycle. The new cosmic Mayan cycle is to bring the endowment of cosmic consciousness upon our historically war-like human race.

Well, what is the mechanism triggering solar activity? If the Earth sciences say solar activity triggers Earth magnetic disturbance, then what triggers solar magnetic disturbance – what triggers the Sunspot mini-cycles and its megacycles of magnetic polarity reversal?

Answer – Solar activity cycles are triggered by electromagnetic disturbances emanating from the core (“Sun”) of the Milky Way Galaxy itself!

Oh, you didn't know the Galaxy has a “core or center” which functions as an “Sun”, emanating frequencies of electromagnetic energy?

Well, any school student could have told you, if only they had been so taught.

It's okay! We're only an entry level intelligent species anyway.

How do we know the electromagnetic disturbances affecting the Sun come from the Galactic center?

One reason – they are so regular, and come in cosmic-clockwork cycles.

Another reason – the Mayan calendar, a most advanced piece of work, has the foresight to tell us so.

Do you really think all human knowledge develops as modern science advances?

No – some knowledge develops as modern humans recognize it already is available.

Every 11.5 years or so, solar activity (sun sports) flare. Every 3553 years

(approximately), the Sun's magnetic field reverses. That is no accident.

That's the Galactic center at work in our cosmic clock.

Oh, there's lots of science to be discovered, believe me. Lot's of denial to let go of.

And it gets better. At the end of every Mayan Long Count, and the end of every Mayan mega-cycle of 26,000 years or so, a cosmic Mayan cycle ends and a new cycle starts.

At that end-cycle moment, electromagnetic beams from the Galactic center swing into our quadrant of the Universe, into our solar system.

The electromagnetic beams from the galactic center may disturb the magnetic fields of the Sun twist the magnetic fields of the Earth, and trigger Earth changes.

The same electromagnetic beams from the galactic center may trigger an onset of cosmic consciousness on Earth.

The process of changeover at Mayan end-cycles is one big electromagnetic phenomenon, emanating from the galactic Sun.

The Mayan calendar is both an astronomical and a spiritual galactic map, and can help us access Spirit's orientation in this coming transformation.

So what are these galactic beams through which Maya cosmology say we are passing?

Cosmologist Brian Swimme tells us in *The Mayan Factor*, that prophetically key vision crafted by the cosmologist formerly known as Jose Arguelles, now Pacal Votan, King of Palenque, Yucatan in the Seventh Century AD. Galactic beams, and their effects on the dynamics of our Sun, are not unknown to recent science.

"...modern science has never spoken of such a beam in the way the Maya do. But physicists have recently become aware of ways we are influenced by beams passing through the galaxy, and this is by itself new. Current astrophysics describes these beams as density waves that sweep through the galaxy and that influence galactic evolution. For instance, our Sun's birth was a result of this wave. The density wave passed through and ignited a giant star, which exploded and evoked our sun's existence.

"In fact, all star formation is due primarily to these beams sweeping through our galaxy. We can begin to formulate the notion of the galaxy as an organism, one involved in its own development. We speak of the "self organizing" dynamics of the galaxy. Or, from a more organismic perspective, we speak of the galaxy as unfolding – the births of stars are pictured as part of the galactic epigenesis. The Sun, then, is seen as activated by dynamics governed by the galactic center; just so the eye of a frog is seen as activated by dynamics governed by its own organismic center.

“The obvious question is this: Just how far does the galactic dynamism go with respect to the development of the Sun and its evolving planets? That is, do the galaxy’s dynamics have only to do with the ignition of the Sun after which the Sun and the Earth are on their own? Or is the galactic beam involved with the evolution of life?

Swimme affirms that galactic beams have been integrally involved in the dynamics of Earth in the entire 4.55 billion years of the Sun’s existence. “First, it can be said quite simply that the galaxy is continually involved with the evolution of Earth and its life. The galactic density beams have swept through the galaxy over the entire 4.55 billion years of the Sun’s existence, and whenever these [beams] pass through the Sun, they alter its dynamics and thus alter the radiant energy that bathes the Earth. I have no doubt that, as evolutionary begins to reflect on this, they will articulate the ways in which the development of life on Earth has been shaped by these dynamics.”

The limitations of the modern scientific method itself has restricted is knowledge about the existence and nature of a galactic beam such as the Maya describe.

“We need to recognize that it was simply impossible for modern science to notice the existence of a galactic beam such as the Maya describe. Modern science focused on material, on its change of position. All qualities – colors, smells, emotions, feelings, and intuitions – were termed secondary, and dismissed. That is, we committed ourselves from the beginning to a mode of consciousness that was never going to recognize the galactic beam.”

The disciplines of modern science and of Mayan cosmology, however, provide us with complementary insights into the galactic beam, a unitary phenomenon that triggers both Earth changes and cosmic consciousness. Contemporary science focuses on the beam as a physical phenomenon, accounting for Earth changes. Mayan cosmology focuses on the same galactic beam as a psychic phenomenon, enabling the evolution of human consciousness.

“The Maya were a people intoxicated with a different cultural aim which required an entirely different development of consciousness. Where the modern scientists have been able to detect experimentally the physical effects of density beams sweeping through the galaxy, the Maya were able to detect experientially beams with different efficacies, beams that influenced not the birth and functioning of stars, but the birth and functioning of ideas, of visions, of convictions. Or rather, what I myself think is the case: both the modern scientists and the Maya respond to the same beams. The modern scientists developed a mode of consciousness enabling them to articulate the physical effects of these [Galactic] beams; the Maya developed a

consciousness enabling them to articulate the psychic effects of these beams.”

What is more, there may be galactic “seasons,” eras that favor a particular type or quality of activity in the galaxy. At the physical level, for example, hydrogen atoms appeared at a specific time in the creative cycle of the galaxy. There may be as well, seasons for the creation of cultures, ideas, and thoughts – human consciousness.

“The question immediately surfaces in the western mind: ‘There may be seasons for the birth of atoms, or of galaxies, or of primitive cells. But what about my thoughts? What about human culture? Are these affected by galactic times?’”

Mayan cosmology spoke, then, of interaction with the Galactic Mind, much as Maya culture interacted consciously with the mind of our Sun. Through the Sun, the Maya accessed the deeper will of the galaxy, the organism of which we are part. The modern science of consciousness – parapsychics and parapsychology – now informs us that thoughts, feelings, and ideas, like photons, can be transmitted.

The galactic core can transmit cosmic consciousness, as well as physically disrupting Earth, planetary and Sun changes, through its beams, “...here we deal with the deepest reaches of the western psyche’s repression. The Maya felt they were engaged with the mind of the Sun, which manifested for them the mind and heart of the galaxy. The Maya felt that the galaxy had desires. Modern scientists heard that and relegated the Maya to the ‘fairy tale’ bin. But our rejection of their wisdom only reveals our dangerously lopsided psychic condition....

“Our difficulty stems from our cultural mistake in thinking of hydrogen atoms and stars and so forth as “just physical”, and ourselves and our psychic life as transcendent, as utterly disconnected from the universe....

“Within this perspective, ‘feelings’ are not fabricated in the transcendent human mind. Instead, feelings are transmitted, just as photons are transmitted. This is really the most ordinary experience. A person standing in the presence of a magnificent granite cliff is suffused with all sorts of feelings; these are the feelings that the mountain has transmitted to the human.

Jose Arguelles gives us the insight that the Maya culture was galactically informed.

“Precisely, because it is based on the principle of harmonic resonance, a

civilization such as the Mayan can be described as galactically informed. That is, by the principle of harmonic resonance, there is a two-way information wave that ripples to and from the individual being to the collective or planetary mind, and from the planetary mind through the Sun to the galactic core.”

Arguelles integrates the sciences of communication and cosmology in illuminating the mechanisms by which the Maya may have exercised their own cosmic awareness of the influence of the galactic core, known as “Hunab Ku” in the Mayan cosmology.

“The sole purpose of the continuous emission of intelligent wave-formation from Hunab Ku, the galactic core and cosmic radio station, is the superior coordination of the member organisms, the star systems...

“The capacity to maintain direct communications and to continue to establish and extend realization of the whole is the conscious attainment of harmony. The end of the process may be nothing more than a transcendent passing of the entire galaxy into an inconceivable stage of harmonic synchronization.

“To be a diviner of harmony, a Maya, would then be to know directly the harmonic frequencies of a level or stage of being, and, in a manner of speaking, to be able to tune into and even take on the qualities of that level or stage of being.

“Because of the attainment of such knowledge, one of the powers of Maya would be that of resonant transduction. Through direct knowledge of wave harmonics and frequency changes, resonant transduction is the ability to apply this knowledge and pass directly from one condition of being to another, from one star system to another.

One aspect of the Mayan end-cycle cosmic consciousness, then, may be humanity’s opening sensitivity to the psychic components of the galactic beam-wave. Our civilization may learn to re-acquire the sort of conscious sensitivity to the mind and will of the galaxy that the Mayas may have possessed.

The end of the 26,000 year Mayan/Galactic cycle during the 2012 AD time window has, according to Arguelles, a dominant goal of the quickening and transformation of our universe.

“Spun through the increasingly accelerated phases of the thirteen cycles of this beam, our planet has arrived at an advanced stage of conscious synchronization of component elements. This has been brought about by the most complex forms of DNA, inducing an artificial leap – the sprawl of

civilization – that in actuality has but one goal – the quickening and transformation of matter.

Remember again the significance of the Trinity nuclear bomb test on July 16, 1945. This was the first release into the Earth's environment of high-level electromagnetic energy. According to Arguelles, it was also the start of a bifurcation of human endeavor into global aggrandizement of power, and increased psychic sensitivity.

“Once this critical transformation of matter was attained on July 16, 1945 [Trinity Test – date of first testing of atomic bomb at Trinity, New Mexico], two basic processes were set in motion. One involved the materialist aggrandizement of power represented by the entrenchment of the prevalent global industrial-social order; the other involved the dissonant quickening of the resonant field of the planet resulting in a wide spectrum of effects from UFO sightings to increased psychism to tectonic plate shifts and terrorism.”

A powerful example of how the influences of the galactic beam may work in integrating this bifurcation between the forces of death and the forces of life affirmation involves the present day Maya and the U.S. Central Intelligence Agency. It has been reported that the CIA may have been an architect and funder of a genocidal war against the Maya from the 1960s through 1996 in Guatemala. If this genocide is a covert operation on a classic CIA model, the genocide of the Maya may have been undertaken to deny the Guatemalan rebels a safe haven among the Maya.

At a deeper death-force level, the CIA's Mayan genocide may have been undertaken to destroy the last living culture practicing the Mayan calendar. If the Maya were killed off, this would functionally weaken the cultural base within which the Mayan calendar still functions. The Mayan calendar, however, may be a gift left for us in time by galactic wisdom, so that humanity may more intelligently navigate the 26,000 end-cycle. If the CIA had been successful in totally obliterating the Mayan culture, the death-force would have been more successful in ensuring that our world would end in cataclysmic Earth changes rather than cosmic consciousness.

The New York Times of February 26, 1999, one day after the Traditional Kiche Maya New Year, reports

GUATEMALA CITY – A truth commission report has concluded that the United States gave money and training to a Guatemalan military that committed “acts of genocide” against the Mayan people during the most brutal armed conflict in Latin America, Guatemala's 36-year civil war.

The report of the independent Historical Clarification Commission, which was released on Thursday, contradicts years of official denial about the torture, kidnapping and execution of thousands of civilians in a war that the

commission estimated killed more than 200,000 Guatemalans.

Although the broad outlines of American support to Guatemala's military have been known, the nine-volume report confirms that the CIA aided Guatemalan military forces.

The commission listed the American training of the officer corps in counterinsurgency techniques as a key factor "which had a significant bearing on human rights violations during the armed confrontation."

The commission, established as a part of a United Nations-supervised peace accord that ended the war in 1996, concluded that the government or allied paramilitary groups were to blame for more than 90 percent of the 42,000 human rights violations, 29,000 of which resulted in deaths or missing persons. That attributes a somewhat higher percentage of deaths to the government and its allies than a report last year by the Roman Catholic Church that examined human rights abuses.

The commission specifically named military intelligence as the organizer of illegal detentions, torture, forced disappearances and executions, and it said that many massacres were a direct result of government policy. It stopped short, however, of identifying individuals responsible for various massacres.

As the conclusions of the long-awaited report were read at a solemn ceremony at the National Theater, human rights workers, relatives of victims and others among the more than 2,000 people broke into standing ovations, sobs, shouts and chants of "Justice! Justice!"

The outbursts repeatedly interrupted speeches as the president and cabinet members sat silently on the theater's first row.

While the scope of the bloodshed had been generally known, the report is the first by an internationally supported panel to lay out the extent of the violence and pin it on the government and its military allies. In unexpectedly strong language, it describes the Guatemalan policy at the height of the war as a policy of genocide.

The report's estimate of more than 200,000 deaths is slightly higher than previous figures, and the number of documented massacres substantially exceeds figures used in previous examinations.

The war, which began in 1960, pitted a rightist military-controlled

government against a classic Latin American left-wing insurgency. Largely a rural war carried out in the hinterlands where Mayan Indians lived, the military assumed that the Mayans sympathized with the insurgents and provided them with supplies, intelligence and shelter.

As a consequence, entire Mayan villages were attacked, burned and inhabitants were slaughtered in an effort to deny the guerrillas protection. The report said the Mayan population paid the highest price, when the military identified them as natural allies of the guerrillas. The result, the report said, was an “aggressive, racist and extremely cruel nature of violations that resulted in the massive extermination of defenseless Mayan communities.”

Christian Tomuschat, the German jurist who led the commission’s 18-month investigation, said, “The results of our investigation demonstrate that in general, the excuse that midlevel commanders acted with a wide margin of autonomy – an excuse used in an attempt to justify what happened as “excesses” and “error” not ordered by superiors – is unsubstantiated and totally lacking any basis.”

The commission recommended a national reparations program for victims and exhumations of “hundreds” of clandestine cemeteries. It called on President Alvaro Arzu Irigoyen and the ex-guerrilla commanders to assume responsibility in the name of the state and ask all Guatemalans for forgiveness.

The three-member commission and an international staff of 272 workers made extensive use of declassified documents from the United States. American assistance fortified the Guatemalan armed forces with aid and training in its anti-Communist campaign. On Thursday, Tomuschat said the commission’s investigation also found that until the mid-1980s, American companies and government officials “exercised pressure to maintain the country’s archaic and unjust socioeconomic structure” and that the CIA supported illegal counterinsurgency operations here.

Besides Tomuschat, the commission members were Edgar Balsells, a lawyer, and Otilia Lux Coti, a leading Mayan educator, both of Guatemala.

The commission did not give specific names of human rights violators, the result of military opposition during the peace negotiations to pointing fingers at specific people.

But some victims' families said no true reconciliation can be achieved in Guatemala without judicial accountability.

"There has to be an end to impunity," said Helen Mack, whose sister, Myrna, was stabbed and killed in 1990, it is believed, for her research on the refugees driven from their homes by the army. The case resulted in the only conviction yet of an army official for human rights violations, and Ms. Mack is pursuing the trial of three other officers for her sister's murder.

On Thursday, the weight of nine years of struggle with Guatemala's ineffective judicial system seem to fall on her as she broke into tears at the National Theater as the commission's conclusions were read.

"We the victims feel vindicated," she later said. "No one can now tell us we're following lies or ghosts anymore."

Guatemalan officials said on Thursday that they would have a response after they have studied the report. The army leadership has remained defiant, accusing international and national "actors" for their roles in the violence and insisting the military acted under a constitutional mandate to defend the state from communism.

Asked about the accusations against the CIA by the commission, the spokesman for the intelligence agency, Bill Harlow, said, "Since we have not seen the report, it would be inappropriate for us to comment."

Donald Planty, the U.S. ambassador, said, "I believe that the report's focus is appropriate, that these were abuses committed by Guatemalans against other Guatemalans – the result of an internal conflict."

Defense Minister Hector M. Barrios, who has promised his own report on the war dead and injured, said Thursday, "I see as positive any effort that is made on behalf of peaceful co-existence in Guatemala."

Arzu left without comment after shaking hands with members of the commission and those formally receiving the report – Alvaro de Soto, a senior U.N. official, and representatives of the Guatemalan government and the ex-guerrilla group, Guatemalan National Revolutionary Unity.

Aides said protocol prevented the president from personally accepting the report, but that decision was seen by many here as intentionally distancing the government from the commission's findings. At several points on

Thursday, people in the theater shouted for the president to get up on stage and receive the report.

Foreign Affairs Minister Eduardo Stein said the government was already implementing some of recommendations, including compensation for victims, judicial reform and changes in the military. Political repression has greatly been reduced in Guatemala, by most accounts, and the guerrillas have regrouped as a political party. There has also been a rise of Indigenous rights and human rights organizations – the changing times were underscored on Thursday when scores of Guatemalans openly confronted government officials in angry outbursts.

But the country is still wrestling with its transition to a full democratic state. Stark poverty and economic inequalities remain. Despite a requirement under the peace accords that the army's size and role be reduced, experts monitoring the progress say that there has been checkered compliance and that the army still has a hold on internal affairs, rather than being focused solely on the defense of the nation.

And just how fragile the peace is was shown last year when a Roman Catholic bishop and leading defender of human rights, Juan Jose Gerardi, was beaten to death with a concrete block just days after making public the results of a three-year investigation of human rights abuses during the war. That report, sponsored by the Catholic church, identified specific military officers and guerrilla groups, and church and human rights groups say they believe the killing was meant to pressure them into renewed silence.

The most heartfelt applause at the National Theater Thursday came when the bishop's name was mentioned as yet another political victim. Many here feel the truth commission's report can help the country's efforts toward change, but only if it is etched into the public consciousness.

"This is not the end of the work," said Feliciano Macario, a board member of a survivors' group called National Widows Committee, which seeks reparations for the loss of homes and land and "moral damages," such as the psychological trauma suffered by orphaned children. "To us, this is the beginning of another struggle."

If you still believe the U.S. Central Intelligence Agency (and its cousins in the intelligence community) to be antiseptic guardians of the truth, please refer to the written works of former CIA agent James Agee, such as CIA Diary. There is little doubt that the profile, methodology, and utter depravity

of the CIA's genocide of the Maya is the same as CIA covert operations which Agee describes taking place in developing nations over the last four decades. James Agee has called for a worldwide repudiation of the CIA, which he describes as the single source generator of human war on the planet.

The coming to public light and recognition of the Maya genocide may be illustrative of the workings of the Galactic beam-wave in the realm of human politics and war, particularly environmental war. The Maya genocide story publicly surfaced in February 1999, at the height of the galactic core alignment.

The influence of the psychic content of the galactic beam-wave may have brought the Maya genocide to public light. In the same way, the effects on human consciousness of the galactic beam-wave may deconstruct the global war-like mindset behind Environmental warfare, and disassemble its global weapons systems.

What is striking about the Mayan cosmology is its awareness of the pervasive influence over human affairs of electromagnetic energy, which can simultaneously produce physical events in the Earth environment, and induce consciousness into new levels of universe appreciation.

“According to the Mayan Factor, we live at the bottom of an electromagnetic ocean. What we call the physical plane Earth is itself the ocean floor, while we, like squids or semi-blinded denizens, swarm about our little ways; only dimly aware that we swim and move across the bottom of a vast, multi-dimensional electromagnetic ocean. How odd we must seem to those who swim and delve in currents far above us, and what can we say about those beings who are beyond the surface? What must they see?”

Mayan cosmology and concepts of the galactic beam-waves of electromagnetic energy work integrate the Earth sciences and psychology with the traditional mystical outlook that all things are alive and think.

But if the galactic beam is to create both Earth changes and cosmic consciousness, is that not almost a contradiction in terms? Why would not our civilization regress to anarchy in consciousness as our planet is violently restructured?

One Mayan cosmologist analogizes the cosmic transition of Earth to an upgrade of computer hardware, and a coming “online” to galactic consciousness.

“Before the end of the year 2012, the ‘program’ we call civilization will be complete. A new galactic program will be ‘opened’ at that time. The ‘upgrading’ of the Earth’s ‘hardware’ called by some “Earth Changes” and the new ‘operating system’ will be put to the test. The Earth will be ‘galactically on-line’ by the year 2013. What will happen after that is beyond

our ability to imagine. Can a baby in the womb imagine what life will be like after its birth?

This insight suggests there is a trade-off between Earth changes and cosmic consciousness. If our human civilization experiences the increasing effects of the galactic beam-wave with resistance and death-force, then our devastation becomes greater. Conversely, if our civilization reacts receptively to the galactic beam-wave, the outcomes may be more consciousness transformation rather than physical destruction.

At the microcosmic, personal level, the same may be said of individuals as we enter the galactic beam-wave. If our individual mind-set is toward greed, aggression, separation, we may experience greater personal disintegration during these end-cycle times. If we attune ourselves to the cosmic frequencies of the galactic beam-wave (call it the “Mind of God”), we may evolve into a more cosmic personal consciousness and transform into a new being in a new era. One can have a personal “doomsday,” or a personal transcendence.

Consciousness is functional and practical and mystical at once.

What time is it in galactic time? Well, recent advances in astronomy suggest that our alignment with the galactic center or equator has actually begun, occurring in the 1998-2001 time window. This is a scholarly quibble with ancient Mayan astrological calculations. The end of the Mayan Long Count, and if its 26,000 year mega-cycle still occurs on December 22, 2012 (some say December 21, 2012).

These subtle re-calculations mean that the effects of the new Galactic beam have already begun, and will be effective across a time window of several decades on either side of the 2012 AD date.

“The present alignment began with the September equinox in 1998. The first “phase” of the alignment with is complete with the June solstice in 1999. The “complete” alignment is comprised of thirteen equinoxes and solstices from September 1998 through September 2001.

“The disk of the Sun, at the exact moment of the December solstices, began to align with the galactic equator around the time of Harmonic Convergence in 1987. This event was also indicated by the Maya Calendar, a useful tool for measuring the flow of galactic energies.

[The Harmonic Convergence, August 16-17, 1987, was according to Arguelles, the date on which humanity received the “Galactic imprint”.]

“The disk of the Sun, at the exact moment of the December solstices, will be

completing the alignment with the galactic equator at the December solstice in 2012. This is recognized as the ending date of a profound Maya Calendar cycle

“These astronomical alignments between the solstice Sun and the galactic equator suggest the timing for the “reception” of galactic energies and codes into our system. Accessing these codes and frequencies can be done with the proper use of the Maya Calendar.

“There are two popular misconceptions regarding the Galactic Alignment. One of these is that the alignment is with the Galactic Center. It is not; it is actually with the Galactic Equator.

“The other example of misinformation is that the galactic alignment occurs in 2012 and this is why the Maya Calendar ends then. There are two problems with this. The alignment occurs a good thirteen years before 2012. The Maya calendar is not off by this many years. This thirteen-year difference is actually accounted for in the Maya calendar. This information is available to those who have been initiated into how the Maya Calendar really works.

“The 2012 date for the galactic alignment suggests that the Maya Calendar is based on an astronomical alignment that ONLY takes place from the Earth’s perspective. The equinoxes and solstices are Earth events. This implies that the Maya calendar is Earth based. This also implies that the Maya Calendar only works on the Earth. This view reveals a lack of appreciation and understanding regarding the true “galactic” nature of the Maya calendar.”

The Mayan calendar is a cosmic tool for navigating our way through a Galactic reality. Prophetic traditions, including the Tibetan, the I Ching (Terence McKenna), the Egyptian, the Aztec, the Judeo-Christian and many others, seem to converge on an end-cycle transformation of our human experience. Each tradition has its variations. As a whole, they point to a unitary truth. The Aztec calendar, for example, may be based on the Pleiades, rather than on the galaxy as is the Mayan tradition. The eternal universe cycles in each tradition may represent the ongoing tension between Light and darkness, which propels our evolution.

What will the new age of cosmic consciousness look like?

Pacal Votan, formerly known as Jose Arguelles, offers some pictures of the

Solar Age on Earth. The Solar Age will have its scientific and perceptual breakthroughs and evolution in human psycho-sensory resonance.

Prophecy commentator Peter Petrisko suggests that if you are unsure how reversing magnetic fields can affect the human mind, think of trying to “re-boot” your brain, as though it were a computer.

“The effect of a magnetic reversal on humans is less known. Confusion might reign, and some theorize a complete 'reboot' of the human mind - the brain IS known to contain magnetite - might occur. However, as the field decreases (before a 'reversal'), one could surmise what may happen by looking at a recent experiment by Dr. Valerie Hunt. Hunt had a room constructed in which the magnetic field intensity could be varied. The following, as spelled out in her book, "Infinite Mind", was observed “When ‘the magnetism was decreased, gross incoordination occurred. The entire neurological integrating mechanism was thrown off. Subjects could not balance their bodies; they had difficulty touching finger to nose or performing simple coordinated movements. They lost kinesthetic awareness.’ Could our bodies adjust as a much more gradual, long-term but worldwide decrease in the magnetic field intensity occurred? That may be doubtful, and if so then at what point near the conclusion of this pre-reversal descent would such incoordination sweep over the human race?”

A “Solar” rather than a “Galactic” perspective on the influence of the galactic beam-wave, and the cosmic consciousness it may bring may constrict Peter Petrisko’s suggestion, however.

Pacal Votan, formerly known as Jose Arguelles, reaches for a vision worthy of our evolutionary occasion as the great Mayan cycle inaugurates the Solar Age. Our inauguration may mean - “At last, Earth will be ready for the emergence into interplanetary civilization.”

“Instead of going to a job at nine o’clock every morning, we shall prepare each day for the celebratory task of ritual sensory attunement to solar galactic pulsation’s. Through sensory fusion – bringing together of various senses into the experience of synaesthesia – we will realize a synergistic amplification of energy and enjoyment.

“The leisure for doing so will be the natural result of having divested ourselves of an unnecessary military economy and the production of wasteful and even toxic consumer goods that were in total disregard of the reality of the light body. Nourishing ourselves as simply and as locally as possible, we shall turn our surplus wealth into the research, education, and artistic production necessary for the establishment of a healthy organism in resonant attunement with the Sun and, through the Sun, with the galactic core, Hunab Ku...”

“Then it shall be ready. The unique moment, the moment of total planetary synchronization, 13.0.0.0.0 on the beam, will arrive – the closing out not only of the Great Cycle, but also of the evolutionary interim called Homo Sapiens. Amidst festive preparation and awesome galactic-solar signs psychically received, the human race, in harmony with the animal and other kingdoms and taking its rightful place in the great electromagnetic sea, will unify as a single circuit. Solar and galactic sound transmissions will inundate the planetary field. At last, Earth will be ready for the emergence into interplanetary civilization.

“Then, as if a switch were being thrown, a great voltage will race through this finally synchronized and integrated circuit called humanity. The Earth itself will be illumined. A current charging both poles will race across the skies, connecting the polar auroras in a single brilliant flash. Like an iridescent rainbow, this circumpolar energy uniting the planetary antipodes will be instantaneously understood as the external projection of the unification of the collective mind of humanity. In that moment of understanding, we shall be collectively projected into an evolutionary domain that is presently inconceivable.”

What then is the ultimate meaning of diverse prophecies of cataclysmic Earth changes and cosmic consciousness?

One answer is – it all depends on us. We are responsible for co-creating cataclysm and/or enlightenment on a collective basis and in our individual realities.

The Mayan cosmology suggests that a war-like, heavily armed military industrial complex, intent on destroying key parts of its Earth system and exporting warfare into outer space may not fare very well as the galactic beam-wave intensifies. Earthly military-industrial civilization may self-destruct, or suffer meltdown, or gradually wither away. That war-like civilization may implode as human consciousness lifts or as Earth changes make shards of its economic and political base.

That’s the good news.

The bad news may in the end be good news also.

What Earth changes may occur, if any, is indeterminate. The psychics and the prophecies suggest cataclysmic outcomes may be possible. If Earth changes do come, perhaps they may be the only mechanism by which our terrestrial eco-cidal culture finally reaches death knell. We can only hope that an evolution in our consciousness triggered by the galactic beam-wave will deconstruct environmental warfare before it can do harm.

The wisdom of the Galactic Mind is such that if we humans had been cooperative, evolved, peaceful, eco-centric, enlightened, no Earth changes

may have come at all. The galactic beam-wave would meet no resistance from the collective human psyche. It is the resistance of the war-like segment of the human mind to cosmic consciousness that may probably itself create chaos and cataclysm on Earth.

Our history, to paraphrase, is a riddle wrapped in an enigma. As a species, we subject ourselves to repeated cycles of war, destruction, rebuilding, only to fall again into war and destruction. The cosmic reasons for these cycles have not yet registered in our collective consciousness.

We can only hope that this Mayan end-cycle may be the last time around unbroken cycles of collective violence. In cosmic consciousness, perhaps we can stabilize ourselves in an unbroken cycle of conscious evolution.

Advice for Earth changes? Try receptivity, centered prayer, meditation, Love. We may actually turn the tide toward Light.

PREPARING, SURVIVING, AND SUSTAINING THE COMING EARTH CHANGES

The sustaining will come as people give of themselves;
survival will come through the preparation and the sustaining....
channeled by Rev. Mary

The Earth changes that are coming to this world also have a corresponding link with internal changes that will be taking place in each and every person. Just as the tides rule the oceans, people sometimes feel similar effects inside their bodies, like when there is a full moon. You see, natural occurrences have a corresponding link internally in the soul of man. These effects will be strongly felt with the coming upheavals -- they will be to such an extent that the people will not be able to ignore them because of the connection in their soul. They will feel these greatly, both psychically, and emotionally. What is going on in different parts of the world will be felt on a soul level. It won't be

as easy as turning off the television and ignoring it. People will be feeling the currents, so-to-speak, internally. That is the internal connection.

Therefore, people need to know and understand that it is not just external Earth changes, that the Earth changes are internal as well on a soul level for people. They must now begin to connect with the Light and not to only be focused on the flashy external changes, because that is what is interesting; but to do their work, their inner work, their prayer work, their connection to the Light and to God -- NOW -- before these things take place. Because that will be their anchor, and their solid ground or foundation to hold onto during the Earth changes.

We are going to address how to prepare, sustain, and survive these internal changes that are, and will be, going on simultaneously with the external changes.

Preparation

We recommend prayer and meditation everyday. We recommend spiritual reading, whether it would be from the Bible, some psalms (the 23rd psalm is really good), or some other spiritual reading that is uplifting, positive, and helps the people to connect with God. It should be something that is enriching, not just flashy things -- but something that has a deep spiritual meaning, something that helps people to grow, and something that feeds their souls. We are not talking about more intellectual predictions, but deep, rich, spiritual food that can enrich the soul. There are many, many books like these.

Prayer, meditation, spiritual reading, and when the you hear about disasters in the land (U.S.) or somewhere else in the world, send out prayers and positive thoughts to these people, to these areas. Ask God to bless the people in these areas. This is this point.

Sustaining

Keeping balanced during the Earth changes. This means that the people must maintain balance -- **NO MATTER WHAT IS GOING ON AROUND THEM.**

We realize that this is extremely difficult when all seems to be falling apart, extremely. They can do this through prayer and meditation. They can do this in prayer with their family. There are prayers that can be prayed. Family prayer is very powerful. They can do their own private meditation. They can send the Light and the Love to the people. But the main thing is for them to remember that these changes are necessary for the growth of the people and that nothing is ever done as punishment, that all is done for the greater development of the soul. No matter what disasters may befall the Earth, they should keep in their minds that this is for the eventual highest good. Even though there are hardships and even death during the changes, ultimately, it is for good. And ultimately, on a soul level, it is for the highest growth and development of everyone going through this.

The people who cross over during this time will, in a sense, have it easier than those who must stay and watch and observe and walk through it. Many people think that they will not be affected because they do not live in a dangerous area. The people who survive because they are in a safe area will have a harder road because they will be aware of all the destruction. But it is also a very great opportunity for these people in sustaining and maintaining their objectivity because they will be able to hold the Light and to be Light houses, so-to-speak, beacons of Light. People need to make sure that the those around them are not in panic, through their own strong anchoring in God and in The Light and in prayer. We cannot emphasize enough -- the power of prayer. And if they will but do this, they will help to maintain the emotional balance within their families, plus aid the people actually walking through these hard experiences.

Surviving the Internal Changes

This is not something that most people have even considered. People have not considered internal changes as part of the external. Surviving these internal changes has greatly to do with the preparation and the knowing that they are coming. Knowing that they are coming and preparing for them, will invoke in people a strength of character and of soul and of knowledge. Their survival will be based on the experiential, not the intellectual. People cannot plan this all ahead of time because right now -- to date -- they do not know exactly what will happen. They know there will be upheaval but they do not know exactly what. We can tell you only it is of such a magnitude that people cannot imagine. There are many things that will be happening, some of which have not been determined yet because it will be like a chain reaction of events. One thing happening will trigger the next, and the next, and the next. Each one will seem more bizarre than the previous one -- to a point where people will be very surprised and think that they cannot be shocked anymore and then the next event like a chain reaction will be triggered and occur and they will say: "That is even more bizarre than the one before."

Their survival will depend on the preparation and the sustaining and people beginning enough in advance to prepare a solid foundation of Light within themselves. People need to know and to recognize that they must have a corresponding amount of growth WITHIN. The knowledge cannot just be learned on the outside in the intellect. One has to grow in the heart and in the soul and in the spirit, for that is where the real strength comes. It is an inner strength, an inner knowing, an inner Light. It cannot be learned in a book. It cannot be found in a lecture. It cannot be found in a movie. It has to come from within each person during prayer and meditation time, uplifting spiritual reading, sending out Love, Light, prayers, and positive thoughts to the people who are going through the disasters.

The sustaining will come as people give of themselves. The survival will

come through the preparation and the sustaining.

The first two steps will ultimately determine the outcome of the third. People **MUST** have compassion in their hearts and **FEEL** for the plight of their brothers and sisters, to **FEEL** that they are brothers and sisters of the people in the different areas going through these hard times, and that they are all one, and that they **CAN** help each other, because that is the spiritual law, and people need to know that these are not just Earthquakes, or disasters. They are Earth changes and their results will be felt throughout the U.S., throughout all the countries. **NO ONE** will go through this time unaffected. No one is in a totally safe area. But, this can be a joyous time, a joyous time of great growth and expansion of the soul. It is an opportunity, at this point and time, to really accelerate one's growth through the right conditioning of the body, mind and soul.

There will be times when people will just have to stay inside in the shelter of their homes. Then, they can help each other and their families and their neighbors, plus the people walking through the hard times, through the disaster times, by forming prayer circles of Light and Love, sending energies, and prayers and Light and Love out of the group to the affected areas.

People can begin to organize now; this is part of the survival. They can begin to organize these groups and if they live in a close proximity to each other, that is good. They can do it that way or they can have a telephone prayer line, but groups in person are the best. They can begin discussions on how to set up these prayer groups now. These Light Workers, these prayer and meditation workers can send out the Light and the Love to the troubled areas. This is how they can organize. Then, when a disaster strikes, the people can come together and pray and send Light and Love as a group, to pray from the heart, to pray with High and Holy Intentions to help.

We have told you that **NO ONE** will escape the Earth changes because the ultimate growth of the soul is for **EVERYONE**. Some people will experience these changes in harsher ways because they will actually have to live or die through them. The ripple effect will be felt by everyone because there will be many things that happen that will affect those people in the safer areas. **EVERY ONE** will feel the effects.

People's survival will depend on their cultivation of deep spiritual discernment. There are many saying many different things and people need to learn deep spiritual discernment in order to find out what is the truth for them.

One thing that a person is saying will not be correct for everyone. There will be many different people saying many different things. Those listening can pray and ask for deep spiritual discernment to know exactly what to believe and what action to take.

People will have to find out through their own volition, in their own way, in

their own timing, WHAT is truth for them.

In so far as timing for the Earth changes is concerned -- we feel that within the next five years it will be completed, beginning in 1998. The time is approximate because it depends on man's free will. If things continue as they are now, we see the time duration to be about five years.

All time is subject to plus or minus from this side; but we feel 1998 will be a year of reckoning -- for the planet -- for the people -- for the United States.

We feel, now until then, many things will be starting economically, worldwide as well for the country, but that the next five years are very crucial for people to decide which way their lives are going, to whom are they serving, and what direction they want to take with their lives and for their souls.

There are some things that will not be able to be changed and there are some things that can be made softer depending upon what mankind does.

It is not, like you say, "One size fits all." Each soul is allowed its free will -- to pass or fail this test. Many people feel they are just here to help. NO ONE incarnates just to help. EVERYONE has their own karma to work through -- their own lessons to work through. NO ONE is here just to help.

EVERYONE is here to grow.

People focus more on the external than the internal. We are all here because we have lessons to learn. We have growth to be attained. We have mistakes to be atoned for and that is what karma really is -- experiencing the other side of the coin -- so the soul knows and the soul grows. Nothing is ever done as punishment. Everything is for the further development of the soul. There are no free rides. Everyone is here because they have work to do within themselves, and people need to know that THIS is the power. This is how they will be able to sustain and survive the Earth changes by going inwardly and becoming VERY, VERY strong. Looking at our faults, looking at our weaknesses and asking for help to turn them into strengths, this is the key. We need to master our own self FIRST. This goes hand in hand with the Earth changes. This is why it is extremely important for people to have a very strong, strong, inner foundation.

As these things are happening externally, the things that people have not looked at, or have buried internally, WILL be coming to the surface. This is the inner Earthquake -- the inner Earth changes that have not been addressed. That is why there is really no escape because the energy that will be coming to the planet at this time is designed to uncover all that has been hidden in darkness, to expose to the Light everything that is not of the Light. And that includes all individuals, and ALL individuals will not be able to bury these feelings any more. They will not be able to do this. Many people numb themselves through drugs and alcohol, hours and hours of mindless television and movies. They delude themselves. They waste their time. When this energy hits -- it will be of such a magnitude that none of these things will

suffice. They will NOT be of comfort. They will NOT divert the mind because it will be like an inner explosion, and this is VERY GOOD. People need not be fearful of this. They need not to worry. The people who will be greatly affected will be the ones who have never thought about internal growth. The ones who have never tried to look at themselves, have never meditated, have never prayed, have never searched for the truth, have never tried to be close to God, or to learn about God, the material people, the people who think that material things are all that there is, **THEY WILL BE THE ONES** who will be greatly affected for the most part. However, **EVERYONE** will feel it. The spiritual people will have an inside track; forewarned is forearmed. These are some of the major changes that Edgar Cayce talked about when he talked about the new millennium and being in the Light. There is no way that the people will be able to carry their old baggage into the Light of the New Millennium!

It is something that **MUST** be pushed through -- must be worked through. People will not be allowed to accelerate to a higher degree of consciousness with their old "stuff," their old hang ups, and everybody has them. **NO ONE** here on the Earth is without their own karma -- or they would not have had to incarnate at this time.

This is not doom and gloom. This is a message of hope. This will be a time of rejoicing because what will be happening to the Earth and its people is that people will no longer be allowed to get away with their games. It is going to call forth a degree of honesty and integrity that has not been seen before on this Earth plane. **THAT** is the rejoicing. **THAT** is the good news. People do not want to hear that they have to go through any hard times to get the growth but, unfortunately, that is the way of this particular transition must play through. The people who are here at this time on the Earth have **KNOWN** about this on a soul level and begged and pleaded to be allowed to be incarnated at this time, even knowing what they would have to walk through, because this is the time of **VERY, VERY** great soul growth. Those who can make it and those who can walk through this experience with faith and love, and joy in their hearts -- knowing that all is taking place for the highest good -- **WILL ACHIEVE GREAT, HIGH, GROWTH**. This will be growth that would not have been possible at any other previous time period. It is an extremely great blessing to be alive at this time. People should not look at this time with fear and dread, but with anticipation of good things coming and to do all they can do to prepare on an inner level.

Many people are preparing by stock-piling food and other supplies. It is good to be prepared for an emergency. However, we tell you right here and right now that you cannot stock-pile inwardly unless you do the things that are necessary to bring your soul into accord with the Light of God.

Not everyone will appreciate this message because it is not flashy. It is not celestial music and cosmic lights, but that is okay. The few that will hear, the

few that this message will touch their hearts and their souls, is all that we care about. If the majority of the people do not like this message, that is fine. This is for the few who want to listen, who want to grow, who want to survive, who really want this connection with the Light of God. THAT is what is important.

Many have studied these things for years. They know it is coming. It is a time of waking up. It is a time for soul growth. Many of the things that are going to happen are karmic in nature. The United States is not being singled out alone, it is the world. It is going to be world wide. It is a cleansing, a purification, a heightening of energy.
